# Introduction

Geo Shell is an interactive shell for geospatial analysis.

```
1. geo shell 0.0.1 (java)
Jared-Ericksons-MacBook-Pro:geo-shell jericks$ geo-shell

Welcome to the Geo Shell!
geo-shell>workspace open --name mem --params memory
Workspace mem opened!
geo-shell>layer create --workspace mem --name points --fields "the_geom=Point EPSG:4326|fid=Integer|name=String"
Created Layer points!
geo-shell>layer add --name points --values "the_geom=POINT (-122.333056 47.60972)|fid=1|name=Seattle"
Added Feature to points
geo-shell>layer add --name points --values "the_geom=POINT (-122.459444 47.241389)|fid=2|name=Tacoma"
Added Feature to points
geo-shell>layer count --name points
2
geo-shell>[]
```

## Modules

Geo Shell has modules for dealing with **vectors**, **rasters**, **tiles**, **maps**, and **styles**.

For **vector** layers, you can use **workspace** commands access layers of spatial data in datasets like shapefiles, geopackages, or postgis databases. With **layer** commands you can perform geoprocessing functions like calculating centroids or buffer features.

For **raster** layers, you can use **format** commands access individual rasters from geotiffs or world images. With **raster** commands you can perform mosaic, raster algebra, or crop functions.

The **tile** commands let you create tile layers, get tiles, and get rasters from tiles.

The **style** commands let you create styles for vector layers and raster.

The **map** commands allow you to visualize vector, raster, and tile layers.

# Use

You can use geo-shell interactively by typing **geo-shell** at the command line.

Or you can write scripts and then execute them from the command line by typing **geo-shell --cmdfile script.txt**

Or by using the **script --file script.txt** command within a geo-shell session.

# Workspace

Workspaces hold vector layers. A Workspace can be a GeoPackage database, a directory of Shapefiles, or a PostGIS database.

## Basics

You can open, close, and list Workspaces. The earliest Workspace to open is an in memory Workspace.

### Open

Open a Workspace.

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Workspace name	true		
params	The connection parameters	true		

```
geo-shell> workspace open --name mem --params memory  
Workspace mem opened!
```

You can open a Workspace with --params or connection parameters. You can give it a name with --name flag.

### List

List open Workspaces. NOTE: No parameters

```
geo-shell> workspace list  
mem = Memory
```

Listing open Workspaces give you the name and the type Workspace.

## Close

Close a Workspace.

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Workspace name	true		

```
geo-shell> workspace close --name mem
```

```
Workspace mem closed!
```

Once you close a Workspace by name it will no longer appear with the list command.

## Layers

List the Layer in a Workspaces.

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Workspace name	true		

In this example, we will open a GeoPackage database filled with data from Natural Earth.

*Open a Workspace*

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg
```

```
Workspace naturalearth opened!
```

*List open Workspaces*

```
geo-shell> workspace layers --name naturalearth
```

```
countries
```

```
ocean
```

```
places
```

```
states
```

*Close a Workspace*

```
geo-shell> workspace close --name naturalearth
```

```
Workspace naturalearth closed!
```

## Layer

## Basics

## Open

Open a Layer.

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Name	Description	Mandatory	Specified Default	Unspecified Default
workspace	The Workspace name	true		
layer	The Layer name	true		
name	The name	false		

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Opened Workspace naturalearth Layer countries as countries

```
geo-shell> workspace close --name naturalearth
```

Workspace naturalearth closed!

## Close

Close a Layer.

```
geo-shell> layer close --name countries
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Opened Workspace naturalearth Layer countries as countries

```
geo-shell> layer close --name countries
```

Layer countries closed!

```
geo-shell> workspace close --name naturalearth
```

Workspace naturalearth closed!

## List

List open Layers.

```
geo-shell> layer list
```

No parameters

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg  
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer open --workspace naturalearth --layer states --name states  
Opened Workspace naturalearth Layer states as states
```

```
geo-shell> layer list  
countries = GeoPackage  
ocean = GeoPackage  
states = GeoPackage
```

```
geo-shell> workspace close --name naturalearth  
Workspace naturalearth closed!
```

## Schema

Inspect a Layer's Schema.

```
geo-shell> layer schema --name countries
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg  
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer schema --name countries
```

Name Type

CRPAY String
ANI String
LIBENR String
ANCNOM String
PAYS_R_GIO String
COMMENT String
```

```
geo-shell> workspace close --name naturalearth
Workspace naturalearth closed!
```

## Count

Count the Feature in a Layer.

```
geo-shell> layer count --name countries
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		

geo-shell> **workspace open** --name naturalearth --params src/test/resources/naturalearth.gpkg  
Workspace naturalearth opened!

geo-shell> **layer open** --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries

geo-shell> **layer count** --name countries  
177

geo-shell> **workspace close** --name naturalearth  
Workspace naturalearth closed!

## Projection

Get the Projection of a Layer.

geo-shell> **layer projection** --name countries

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		

geo-shell> **workspace open** --name naturalearth --params src/test/resources/naturalearth.gpkg  
Workspace naturalearth opened!

geo-shell> **layer open** --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries

geo-shell> **layer projection** --name countries  
EPSG:4326

geo-shell> **workspace close** --name naturalearth  
Workspace naturalearth closed!

## Features

Display the Features of a Layer.

geo-shell> **layer features** --name states --filter "NAME\_1='North Dakota'"

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		
filter	The CQL Filter	false		

sort	A Sort parameter (fld dir)	false		
start	The start index	false		-1
max	The maximum number of records	false		-1
field	A subfield to include	false		

geo-shell> **workspace open** --name naturalearth --params src/test/resources/naturalearth.gpkg  
 Workspace naturalearth opened!

geo-shell> **layer open** --workspace naturalearth --layer states --name states  
 Opened Workspace naturalearth Layer states as states

geo-shell> **layer features** --name states --filter "NAME\_1='North Dakota'"  
 Feature (states.3)

---

```

```
Workspace naturalearth closed!
```

## Get Style

Get the Layer's style.

```
geo-shell> layer style get --name states --style target/states.sld
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		
style	The SLD File	false		

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg
```

```
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer states --name states
```

```
Opened Workspace naturalearth Layer states as states
```

```
geo-shell> style vector default --layer states --color #1E90FF --file examples/states_simple.sld
```

```
Default Vector Style for states written to /home/runner/work/geo-shell/geo-shell/examples/states_simple.sld!
```

```
geo-shell> layer style get --name states --style target/states.sld
```

```
states style written to /home/runner/work/geo-shell/geo-shell/target/states.sld
```

```
geo-shell> workspace close --name naturalearth
```

```
Workspace naturalearth closed!
```

```

      </sld:FeatureTypeStyle>
    </sld:UserStyle>
  </sld:UserLayer>
</sld:StyledLayerDescriptor>

```

## Set Style

Set a Layer's style

geo-shell> **layer style get --name states --style target/states\_simple.sld**

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		
style	The SLD or CSS File	true		

geo-shell> **workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg**  
Workspace naturalearth opened!

geo-shell> **layer open --workspace naturalearth --layer states --name states**  
Opened Workspace naturalearth Layer states as states

geo-shell> **style vector default --layer states --color #1E90FF --file examples/states\_simple.sld**

```
Default Vector Style for states written to /home/runner/work/geo-shell/geo-shell/examples/states_simple.sld!
```

```
geo-shell> layer style get --name states --style target/states_simple.sld
states style written to /home/runner/work/geo-shell/geo-shell/target/states_simple.sld
```

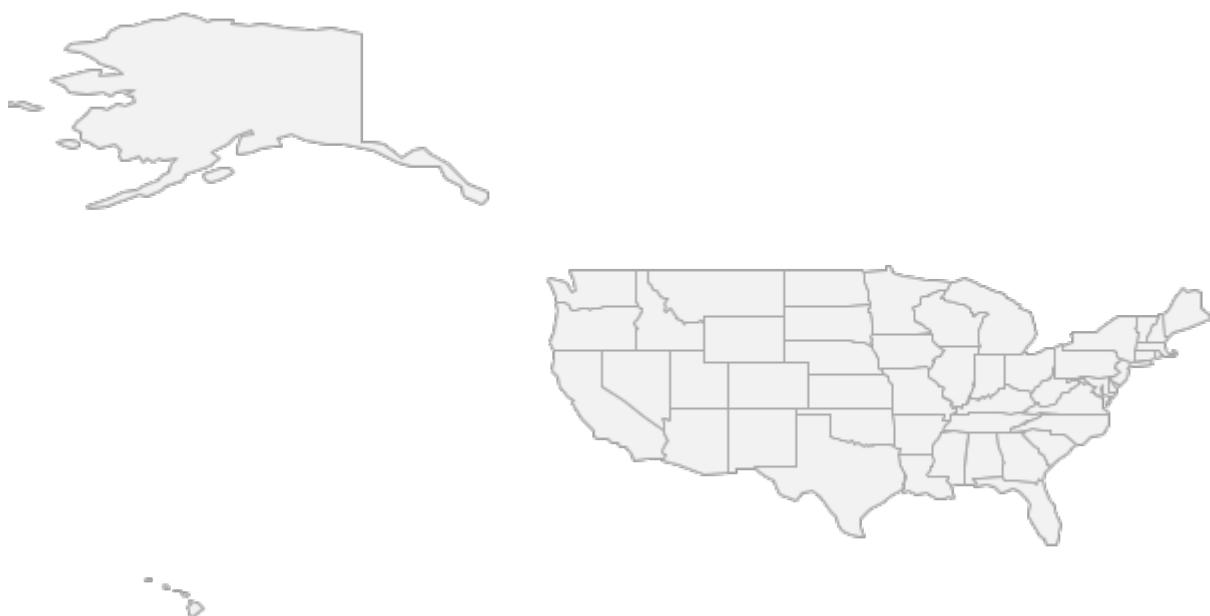

```
geo-shell> map open --name map
Map map opened!
```

```
geo-shell> map add layer --name map --layer states
Added states layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_set_style.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_set_style.png!
```

```
geo-shell> map close --name map
Map map closed!
```

```
geo-shell> workspace close --name naturalearth
Workspace naturalearth closed!
```

## Copy

Copy one Layer to another Workspace.

```
geo-shell> layer copy --input-name states_gpkg --output-workspace shapefiles --output-name states
```

Name	Description	Mandatory	Specified Default	Unspecified Default

input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
filter	The CQL Filter	false		
sort	A Sort parameter (fld dir)	false		
start	The start index	false		-1
max	The maximum number of records	false		-1
field	A subfield to include	false		

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer states --name states_gpkg
Opened Workspace naturalearth Layer states as states_gpkg
```

```
geo-shell> workspace open --name shapefiles --params target/
Workspace shapefiles opened!
```

```
geo-shell> layer copy --input-name states_gpkg --output-workspace shapefiles --output-name states
Done!
```

```
geo-shell> layer count --name states
52
```

```
geo-shell> workspace close --name shapefiles
Workspace shapefiles closed!
```

```
geo-shell> workspace close --name naturalearth
Workspace naturalearth closed!
```

## Create

Create a new Layer.

```
geo-shell> layer create --workspace mem --name points --fields "the_geom=Point
EPSG:4326|fid=Int|name=String"
```

Name	Description	Mandatory	Specified Default	Unspecified Default
workspace	The Workspace name	true		

name	The new Layer name	true		
fields	The pipe delimited list of fields (name=type)	true		

geo-shell> **workspace open** --name mem --params memory

Workspace mem opened!

geo-shell> **layer create** --workspace mem --name points --fields "the\_geom=Point EPSG:4326 | fid=Int | name=String"

Created Layer points!

geo-shell> **layer schema** --name points

Name Type

-----  
the\_geom Point

fid Integer

name String

## Add

Add a new Feature to a Layer.

geo-shell> **layer add** --name points --values "the\_geom=POINT (-122.333056 47.609722) | fid=1 | name=Seattle"

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		
values	The pipe delimited list of values (field=value)	true		

geo-shell> **workspace open** --name mem --params memory

Workspace mem opened!

geo-shell> **layer create** --workspace mem --name points --fields "the\_geom=Point EPSG:4326 | fid=Int | name=String"

Created Layer points!

geo-shell> **layer add** --name points --values "the\_geom=POINT (-122.333056 47.609722) | fid=1 | name=Seattle"

Added Feature to points

geo-shell> **layer add** --name points --values "the\_geom=POINT (-122.459444 47.241389) | fid=2 | name=Tacoma"

Added Feature to points

```
geo-shell> layer count --name points  
2
```

## Delete

Delete features from the Layer

```
geo-shell> layer delete --name points --filter "fid=2"
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		
filter	The CQL Filter	true		

```
geo-shell> workspace open --name mem --params memory  
Workspace mem opened!
```

```
geo-shell> layer create --workspace mem --name points --fields "the_geom=Point  
EPSG:4326|fid=Int|name=String"  
Created Layer points!
```

```
geo-shell> layer add --name points --values "the_geom=POINT (-122.333056  
47.609722)|fid=1|name=Seattle"  
Added Feature to points
```

```
geo-shell> layer add --name points --values "the_geom=POINT (-122.459444  
47.241389)|fid=2|name=Tacoma"  
Added Feature to points
```

```
geo-shell> layer count --name points  
2
```

```
geo-shell> layer delete --name points --filter "fid=2"  
Deleted fid=2 Features from points
```

```
geo-shell> layer count --name points  
1
```

## Remove

Remove a Layer from a Workspace.

```
geo-shell> layer remove --layer polygons --workspace mem
```

Name	Description	Mandatory	Specified Default	Unspecified Default
workspace	The Workspace name	true		

layer	The Layer name	true		
-------	----------------	------	--	--

geo-shell> **workspace open** --name mem --params memory  
Workspace mem opened!

geo-shell> **layer create** --workspace mem --name points --fields "the\_geom=Point EPSG:4326|fid=Int|name=String"  
Created Layer points!

geo-shell> **layer create** --workspace mem --name lines --fields "the\_geom=LineString EPSG:4326|fid=Int|name=String"  
Created Layer lines!

geo-shell> **layer create** --workspace mem --name polygons --fields "the\_geom=Polygon EPSG:4326|fid=Int|name=String"  
Created Layer polygons!

geo-shell> **workspace layers** --name mem  
lines  
points  
polygons

geo-shell> **layer remove** --layer polygons --workspace mem  
Layer polygons removed from Workspace mem

geo-shell> **workspace layers** --name mem  
lines  
points

## Update Field

Update the values of a field

geo-shell> **layer updatefield** --name points --field state --value WA

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		
field	The field name	true		
value	The value	true		
filter	The CQL Filter	false	INCLUDE	INCLUDE
script	Whether the value is a script or not	false	false	false

geo-shell> **workspace open** --name mem --params memory  
Workspace mem opened!

geo-shell> **layer create** --workspace mem --name points --fields "the\_geom=Point

```
EPSG:4326 | fid=Int | name=String | state=String"
```

```
Created Layer points!
```

```
geo-shell> layer add --name points --values "the_geom=POINT (-122.333056  
47.609722)|fid=1|name=Seattle"  
Added Feature to points
```

```
geo-shell> layer add --name points --values "the_geom=POINT (-122.459444  
47.241389)|fid=2|name=Tacoma"  
Added Feature to points
```

```
geo-shell> layer updatefield --name points --field state --value WA  
Done updating state with WA!
```

```
geo-shell> layer features --name points  
Feature (fid—3141f5b5_17c420eabe6_-650c)
```

```
-----  
the_geom = POINT (-122.333056 47.609722)  
fid = 1  
name = Seattle  
state = WA
```

```
Feature (fid—3141f5b5_17c420eabe6_-650a)
```

```
-----  
the_geom = POINT (-122.459444 47.241389)  
fid = 2  
name = Tacoma  
state = WA
```

## Add Fields

Add Fields to the input Layer and save the result to the output Layer

```
geo-shell> layer addfields --input-name points --output-workspace mem --output-name points2  
--fields "name=String,state=String"
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
fields	The Fields (name=type proj)	true		

```
geo-shell> workspace open --name mem --params memory  
Workspace mem opened!
```

```
geo-shell> layer create --workspace mem --name points --fields "the_geom=Point EPSG:4326"
Created Layer points!
```

```
geo-shell> layer addfields --input-name points --output-workspace mem --output-name points2
--fields "name=String,state=String"
Done!
```

```
geo-shell> layer schema --name points2
```

```
Name Type
```

```
-----  
the_geom Point  
name String  
state String
```

## Add Area Field

Add area Field to the input Layer and save the result to the output Layer

```
geo-shell> layer addareafield --input-name states --output-workspace mem --output-name
states_area --area-fieldname AREA
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
area-fieldname	The area field name	true	area	area

```
geo-shell> workspace open --name mem --params memory
Workspace mem opened!
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer states --name states
Opened Workspace naturalearth Layer states as states
```

```
geo-shell> layer addareafield --input-name states --output-workspace mem --output-name
states_area --area-fieldname AREA
Done!
```

```
geo-shell> layer schema --name states_area
```

```
Name Type
```

```
-----  
the_geom MultiPolygon
```

```

## Validity

Check for invalid geometries in the Layer.

```
geo-shell> layer validity --name areas
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Layer name	true		
fields	A comma delimited list of Fields to include	false		

```
geo-shell> workspace open --name areas --params src/test/resources/invalid.properties
Workspace areas opened!
```

```
geo-shell> layer open --workspace areas --layer invalid --name areas
Opened Workspace areas Layer invalid as areas
```

```
geo-shell> layer validity --name areas
```

Values Reason

---

```
invalid.1360815594529 Self-intersection
```

## Fix

Fix the geometries of the features of the input Layer and save them to the output Layer

```
geo-shell> layer fix --input-name lines --output-workspace mem --output-name lines_fixed
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		

```
geo-shell> workspace open --name mem --params memory
```

Workspace mem opened!

```
geo-shell> layer create --workspace mem --name lines --fields "the_geom=LineString  
EPSG:4326|fid=Int|name=String"  
Created Layer lines!
```

```
geo-shell> layer add --name lines --values "the_geom=LINESTRING (0 0, 0 0, 0 0, 1  
1)|fid=1|name=Location 1"
```

Added Feature to lines

```
geo-shell> layer add --name lines --values "the_geom=LINESTRING (1 1, 2 2, 2 2, 2 2,  
3 3)|fid=2|name=Location 2"
```

Added Feature to lines

```

geo-shell> map draw --name map --file examples/layer_coordinates.png --bounds "-180,-8.233,-36.738,73.378"
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_coordinates.png!

geo-shell> map close --name map
Map map closed!
```

## Delaunay

Calculate a delaunay diagram of the input Layer and save it to the output Layer.

```
geo-shell> layer delaunay --input-name places --output-workspace layers --output-name delaunay
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
geometry-field	The geometry field name	false	the_geom	the_geom

```
geo-shell> workspace open --name layers --params memory

Added delaunay layer to map map

Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_delaunay.png!
geo-shell> map draw --name map --file examples/layer_delaunay.png

Map map closed!
geo-shell> map close --name map
```

## Densify

Densify the features of the input Layer and save them to the output Layer

```
geo-shell> layer densify --input-name states --output-workspace layers --output-name states_densified --distance 0.1
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
distance	The distance tolerance	true		

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer states --name states

```
geo-shell> map open --name map
```

Map map opened!

```
geo-shell> map add layer --name map --layer ocean
```

Added ocean layer to map map

```
geo-shell> map add layer --name map --layer countries
```

Added countries layer to map map

Added coordinates layer to map map

```
geo-shell> map add layer --name map --layer coordinates
```

Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer\_densify.png!

```
geo-shell> map draw --name map --file examples/layer_densify.png --bounds "-180,-8.233,-  
36.738,73.378"
```

Map map closed!

```
geo-shell> map close --name map
```

## Dissolve

Dissolve the Features of a Layer by a Field.

```
geo-shell> layer dissolve --input-name states --output-workspace layers --output-name regions  
--field SUB_REGION
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
field	The field to use to dissolve features	true		
idField	The name of the id field	false	id	id
countField	The name of the count field	false	count	count

```
geo-shell> workspace open --name layers --params memory  
Workspace layers opened!
```

```
geo-shell> workspace open --name shapefiles --params examples/states/states.shp  
Workspace shapefiles opened!
```

```
geo-shell> layer open --workspace shapefiles --layer states --name states
Opened Workspace shapefiles Layer states as states

geo-shell> layer dissolve --input-name states --output-workspace layers --output-name regions
--field SUB_REGION
Done dissolving states to regions by SUB_REGION!

geo-shell> style vector uniquevalues --layer regions --field SUB_REGION --colors MutedTerrain
--file [silver] examples/regions.sld

```

## Erase

Erase one Layer from another Layer

```
geo-shell> layer erase --input-name a --other-name b --output-workspace results --output-name results
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
other-name	The other Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		

```
geo-shell> workspace open --name layers --params src/test/resources/layeralgebra.gpkg  
Workspace layers opened!
```

```
geo-shell> workspace open --name results --params memory  
Workspace results opened!
```

```
geo-shell> layer open --workspace layers --layer a --name a  
Opened Workspace layers Layer a as a
```

```
geo-shell> layer open --workspace layers --layer b --name b
```

Opened Workspace layers Layer b as b

```
geo-shell> layer erase --input-name a --other-name b --output-workspace results --output-name results
```

Done erasing a from b to create results!

```
geo-shell> style vector default --layer a --color red --opacity 0.75 --file examples/red.sld  
Default Vector Style for a written to /home/runner/work/geo-shell/geo-shell/examples/red.sld!
```

```
geo-shell> style vector default --layer b --color green --opacity 0.75 --file examples/green.sld  
Default Vector Style for b written to /home/runner/work/geo-shell/geo-shell/examples/green.sld!
```

```
geo-shell> style vector default --layer results --color blue --opacity 0.75 --file examples/blue.sld  
Default Vector Style for results written to /home/runner/work/geo-shell/geo-shell/examples/blue.sld!
```

```
geo-shell> layer style set --name a --style examples/red.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/red.sld set on a
```

```
geo-shell> layer style set --name b --style examples/green.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/green.sld set on b
```

```
geo-shell> layer style set --name results --style examples/blue.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/blue.sld set on results
```

```
geo-shell> map open --name map  
Map map opened!
```

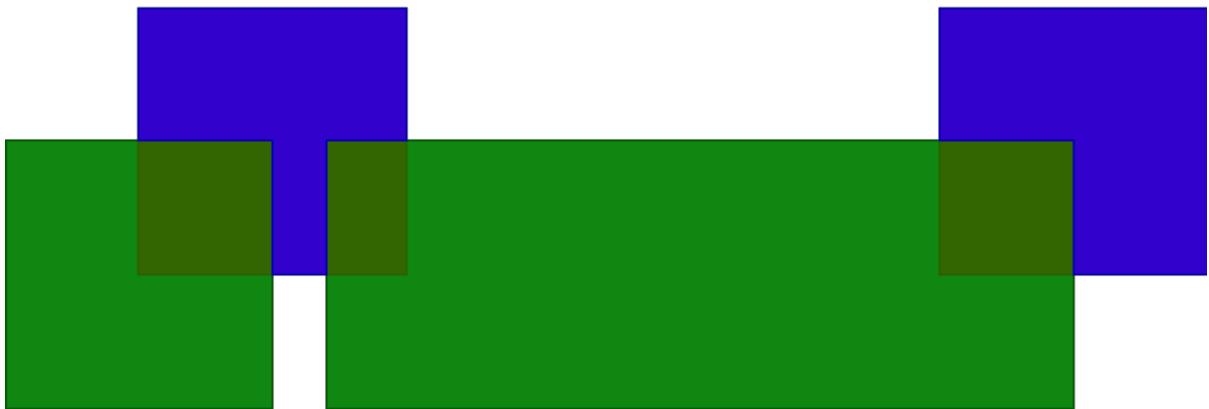

```
geo-shell> map add layer --name map --layer a  
Added a layer to map map
```

```
geo-shell> map add layer --name map --layer b  
Added b layer to map map
```

```
geo-shell> map add layer --name map --layer results  
Added results layer to map map
```

Map map closed!
```

## Grid Row / Column

Create a grid Layer with rows and columns

```
geo-shell> layer grid rowcol --output-workspace layers --output-name rowcol --geometry -180,-90,180,90 --rows 10 --columns 8
```

Name	Description	Mandatory	Specified Default	Unspecified Default
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
rows	The number of rows	true		
columns	The number of columns	true		
geometry	The constraining geometry	true		
type	The geometry type (point or polygon)	false	polygon	polygon
projection	The projection	false	EPSG:4326	EPSG:4326
geometry-field	The geometry field name	false	the_geom	the_geom

```
geo-shell> workspace open --name layers --params memory
```

Workspace layers opened!

```
geo-shell> layer grid rowcol --output-workspace layers --output-name rowcol --geometry -180,-90,180,90 --rows 10 --columns 8
```

Done!

```
geo-shell> style vector default --layer rowcol --color #1E90FF --opacity 0.30 --file examples/rowcol.sld
```

Default Vector Style for rowcol written to /home/runner/work/geo-shell/geo-shell/examples/rowcol.sld!

```
geo-shell> layer style set --name rowcol --style examples/rowcol.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/rowcol.sld set on rowcol

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Opened Workspace naturalearth Layer countries as countries

```
geo-shell> layer style set --name countries --style examples/countries.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
```

Opened Workspace naturalearth Layer ocean as ocean

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

```
geo-shell> map open --name map
```

Map map opened!

```
geo-shell> map add layer --name map --layer ocean
```

Added ocean layer to map map

```
geo-shell> map add layer --name map --layer countries
```

Added countries layer to map map

```
geo-shell> map add layer --name map --layer rowcol
```

Added rowcol layer to map map

```

Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer\_grid\_rowcol.png!

```
geo-shell> map close --name map
```

Map map closed!

## Grid Width / Height

Create a grid Layer with cell width and height

```
geo-shell> layer grid widthheight --output-workspace layers --output-name widthheight --geometry -180,-90,180,90 --cell-width 8 --cell-height 7
```

Name	Description	Mandatory	Specified Default	Unspecified Default
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
cell-width	The width of each cell	true		
cell-height	The height of each cell	true		
geometry	The constraining geometry	true		
type	The geometry type (point or polygon)	false	polygon	polygon
projection	The projection	false	EPSG:4326	EPSG:4326
geometry-field	The geometry field name	false	the_geom	the_geom

```
geo-shell> workspace open --name layers --params memory
```

Workspace layers opened!

```
geo-shell> layer grid widthheight --output-workspace layers --output-name widthheight --geometry  
-180,-90,180,90 --cell-width 8 --cell-height 7
```

Done!

```
geo-shell> style vector default --layer widthheight --color #1E90FF --opacity 0.30 --file  
examples/widthheight.sld
```

Default Vector Style for widthheight written to /home/runner/work/geo-shell/geo-  
shell/examples/widthheight.sld!

```
geo-shell> layer style set --name widthheight --style examples/widthheight.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/widthheight.sld set on widthheight

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

Workspace naturalearth opened!

```

```

Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer\_grid\_widthheight.png!

```
geo-shell> map close --name map
```

Map map closed!

## Identity

Calculate the intersection between a Layer with another Layer

```
geo-shell> layer identity --input-name a --other-name b --output-workspace results --output-name results
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
other-name	The other Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
postfix-all	Whether to postfix all field names when combining schemas	false	false	false
include-duplicates	Whether to include duplicate field names	false	true	true

```
geo-shell> workspace open --name layers --params src/test/resources/layeralgebra.gpkg  
Workspace layers opened!
```

```
geo-shell> workspace open --name results --params memory
Workspace results opened!

geo-shell> layer open --workspace layers --layer a --name a
Opened Workspace layers Layer a as a

geo-shell> layer open --workspace layers --layer b --name b
Opened Workspace layers Layer b as b

geo-shell> layer identity --input-name a --other-name b --output-workspace results --output-name
results
Done calculating the identity between a and b to create results!

geo-shell> style vector default --layer a --color red --opacity 0.75 --file examples/red.sld
Default Vector Style for a written to /home/runner/work/geo-shell/geo-shell/examples/red.sld!

geo-shell> style vector default --layer b --color green --opacity 0.75 --file examples/green.sld
Default Vector Style for b written to /home/runner/work/geo-shell/geo-shell/examples/green.sld!

geo-shell> style vector default --layer results --color blue --opacity 0.75 --file examples/blue.sld
Default Vector Style for results written to /home/runner/work/geo-shell/geo-shell/examples/blue.sld!

geo-shell> layer style set --name a --style examples/red.sld
Style /home/runner/work/geo-shell/geo-shell/examples/red.sld set on a

geo-shell> layer style set --name b --style examples/green.sld
Style /home/runner/work/geo-shell/geo-shell/examples/green.sld set on b

geo-shell> layer style set --name results --style examples/blue.sld
Style /home/runner/work/geo-shell/geo-shell/examples/blue.sld set on results

geo-shell> map open --name map
Map map opened!

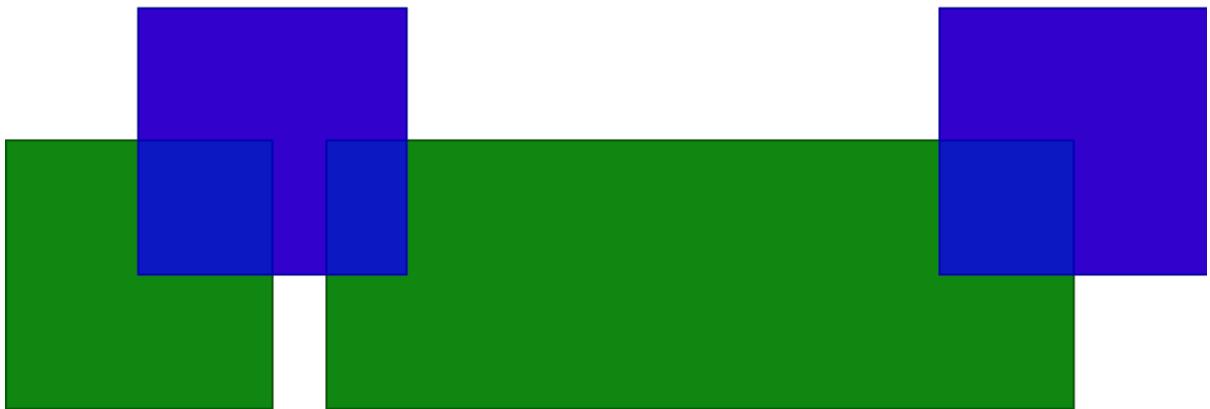

geo-shell> map add layer --name map --layer a
Added a layer to map map

geo-shell> map add layer --name map --layer b
Added b layer to map map

geo-shell> map add layer --name map --layer results
Added results layer to map map

geo-shell> map draw --name map --file examples/layer_identity.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_identity.png!

geo-shell> map close --name map
Map map closed!
```

## Intersection

Calculate the intersection between a Layer with another Layer

```
geo-shell> layer intersection --input-name a --other-name b --output-workspace results --output-name results
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
other-name	The other Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
postfix-all	Whether to postfix all field names when combining schemas	false	false	false
include-duplicates	Whether to include duplicate field names	false	true	true

```
geo-shell> workspace open --name layers --params src/test/resources/layeralgebra.gpkg  
Workspace layers opened!
```

```
geo-shell> workspace open --name results --params memory
Workspace results opened!

geo-shell> layer open --workspace layers --layer a --name a
Opened Workspace layers Layer a as a

geo-shell> layer open --workspace layers --layer b --name b
Opened Workspace layers Layer b as b

geo-shell> layer intersection --input-name a --other-name b --output-workspace results --output
-name results
Done calculating the intersection between a and b to create results!

geo-shell> style vector default --layer a --color red --opacity 0.75 --file examples/red.sld
Default Vector Style for a written to /home/runner/work/geo-shell/geo-shell/examples/red.sld!

Map map closed!
```

## Points Along Lines

Create points along lines

```
geo-shell> layer points along lines --input-name mississippi --output-workspace layers --output-name points --distance 2.0
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
distance	The distance between points	true		

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> workspace open --name rivers --params
src/test/resources/rivers/ne_110m_rivers_lake_centerlines.shp
Workspace rivers opened!
```

```
geo-shell> layer open --workspace rivers --layer ne_110m_rivers_lake_centerlines --name rivers
Opened Workspace rivers Layer ne_110m_rivers_lake_centerlines as rivers
```

```
geo-shell> layer copy --input-name rivers --output-workspace layers --output-name mississippi #  
[gray]--filter# "name='Mississippi'"
```

Done!

```
geo-shell> style vector default --layer mississippi --color blue --file examples/river.sld  
Default Vector Style for mississippi written to /home/runner/work/geo-shell/geo-  
shell/examples/river.sld!
```

```
geo-shell> layer style set --name mississippi --style examples/river.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/river.sld set on mississippi
```

```
geo-shell> layer points along lines --input-name mississippi --output-workspace layers --output  
-name points --distance 2.0
```

Done placing points along mississippi every 2.0 to create points!

```
geo-shell> style vector default --layer points --color green --file examples/points.sld  
Default Vector Style for points written to /home/runner/work/geo-shell/geo-  
shell/examples/points.sld!
```

```
geo-shell> layer style set --name points --style examples/points.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/points.sld set on points
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg  
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean
```

```

Map map opened!
```

```
geo-shell> map add layer --name map --layer ocean  
Added ocean layer to map map
```

```
geo-shell> map add layer --name map --layer countries  
Added countries layer to map map
```

```
geo-shell> map add layer --name map --layer mississippi  
Added mississippi layer to map map
```

```
geo-shell> map add layer --name map --layer points  
Added points layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_points_along_lines.png --bounds "-180,-8.233,-36.738,73.378"
```

```
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_points_along_lines.png!
```

## Simplify

Simplify the features of the input Layer and save them to the output Layer

```
geo-shell> layer simplify --input-name mississippi --output-workspace layers --output-name simplified --distance 1.0
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
algorithm	The simplify algorithm (DouglasPeucker - dp or TopologyPreserving - tp)	false	tp	tp
distance	The distance tolerance	true		

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!

geo-shell> workspace open --name rivers --params
src/test/resources/rivers/ne_110m_rivers_lake_centerlines.shp
Workspace rivers opened!

geo-shell> layer open --workspace rivers --layer ne_110m_rivers_lake_centerlines --name rivers
Opened Workspace rivers Layer ne_110m_rivers_lake_centerlines as rivers

geo-shell> layer copy --input-name rivers --output-workspace layers --output-name mississippi #
[gray]--filter# "name='Mississippi'"
Done!

geo-shell> layer simplify --input-name mississippi --output-workspace layers --output-name
simplified --distance 1.0
Done!

geo-shell> style vector default --layer simplified --color blue --file examples/river.sld
Default Vector Style for simplified written to /home/runner/work/geo-shell/geo-
shell/examples/river.sld!

geo-shell> layer style set --name simplified --style examples/river.sld
Style /home/runner/work/geo-shell/geo-shell/examples/river.sld set on simplified

geo-shell> layer coordinates --input-name simplified --output-workspace layers --output-name
points
Done!

geo-shell> style vector default --layer points --color green --file examples/points.sld
Default Vector Style for points written to /home/runner/work/geo-shell/geo-

```
geo-shell> map add layer --name map --layer ocean
```

```
Added ocean layer to map map
```

```
geo-shell> map add layer --name map --layer countries
```

```
Added countries layer to map map
```

```
geo-shell> map add layer --name map --layer simplified
```

```
Added simplified layer to map map
```

```
geo-shell> map add layer --name map --layer points
```

```
Added points layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_simplify.png --bounds "-180,-8.233,-36.738,73.378"
```

```
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_simplify.png!
```

```
geo-shell> map close --name map
```

```
Map map closed!
```

## Symmetric Difference

Calculate the symmetric difference between a Layer and another Layer.

```
geo-shell> layer symdifference --input-name a --other-name b --output-workspace results --output-name results
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
other-name	The other Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
postfix-all	Whether to postfix all field names when combining schemas	false	false	false
include-duplicates	Whether to include duplicate field names	false	true	true

geo-shell> **workspace open** --name layers --params src/test/resources/layeralgebra.gpkg  
Workspace layers opened!

geo-shell> **workspace open** --name results --params memory  
Workspace results opened!

geo-shell> **layer open** --workspace layers --layer a --name a  
Opened Workspace layers Layer a as a

geo-shell> **layer open** --workspace layers --layer b --name b  
Opened Workspace layers Layer b as b

geo-shell> **layer symdifference** --input-name a --other-name b --output-workspace results --output-name results  
Done calculating the symmetric difference between a and b to create results!

geo-shell> **style vector default** --layer a --color red --opacity 0.75 --file examples/red.sld  
Default Vector Style for a written to /home/runner/work/geo-shell/geo-shell/examples/red.sld!

geo-shell> **style vector default** --layer b --color green --opacity 0.75 --file examples/green.sld  
Default Vector Style for b written to /home/runner/work/geo-shell/geo-shell/examples/green.sld!

geo-shell> **style vector default** --layer results --color blue --opacity 0.75 --file examples/blue.sld  
Default Vector Style for results written to /home/runner/work/geo-shell/geo-shell/examples/blue.sld!

geo-shell> **layer style set** --name a --style examples/red.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/red.sld set on a

geo-shell> **layer style set** --name b --style examples/green.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/green.sld set on b

```
geo-shell> layer style set --name results --style examples/blue.sld
Style /home/runner/work/geo-shell/geo-shell/examples/blue.sld set on results
```

```
geo-shell> map open --name map
Map map opened!
```

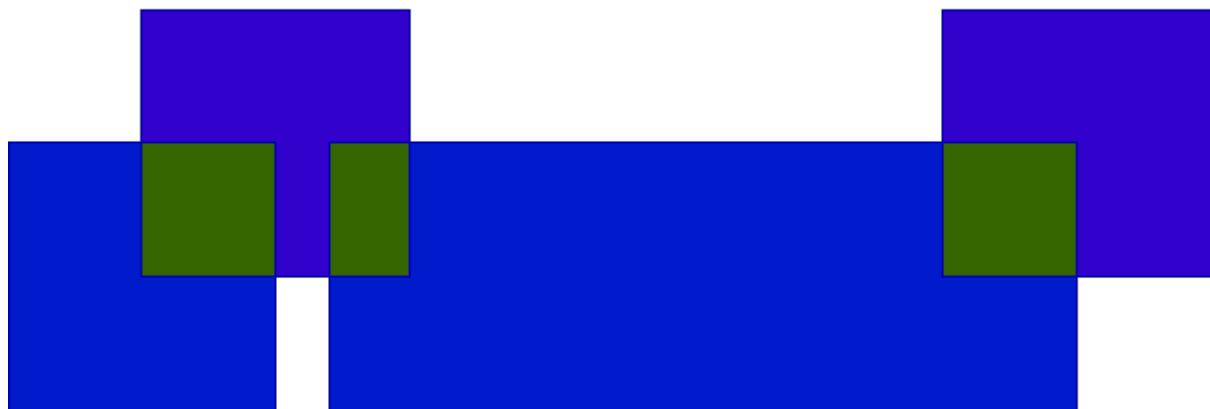

```
geo-shell> map add layer --name map --layer a
Added a layer to map map
```

```
geo-shell> map add layer --name map --layer b
Added b layer to map map
```

```
geo-shell> map add layer --name map --layer results
Added results layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_symdifference.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_symdifference.png!
```

```
geo-shell> map close --name map
Map map closed!
```

## Transform

Transform the features of the input Layer and save them to the output Layer

```
geo-shell> layer transform --input-name points --output-workspace layers --output-name polys
--transforms "the_geom=buffer(the_geom, 5)|id=id*10"
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
transforms	The pipe delimited list of transforms (field=expression or function)	true		

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> layer random --output-workspace layers --output-name points --geometry -180,-90,180,90
--number 100 --projection EPSG:4326
Done!
```

```
geo-shell> style vector default --layer points --color #1E90FF --file examples/points.sld
Default Vector Style for points written to /home/runner/work/geo-shell/geo-shell/examples/points.sld!
```

```
geo-shell> layer style set --name points --style examples/points.sld
Style /home/runner/work/geo-shell/geo-shell/examples/points.sld set on points
```

```
geo-shell> layer transform --input-name points --output-workspace layers --output-name polys
--transforms "the_geom=buffer(the_geom, 5)|id=id*10"
Done transforming points to polys with the_geom=buffer(the_geom, 5)|id=id*10!
```

```
geo-shell> style vector default --layer polys --color blue --opacity 0.25 --file examples/polys.sld
Default Vector Style for polys written to /home/runner/work/geo-shell/geo-shell/examples/polys.sld!
```

```
geo-shell> layer style set --name polys --style examples/polys.sld
Style /home/runner/work/geo-shell/geo-shell/examples/polys.sld set on polys
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

geo-shell> **map open** --name map

Map map opened!

geo-shell> **map add layer** --name map --layer ocean

Added ocean layer to map map

geo-shell> **map add layer** --name map --layer countries

Added countries layer to map map

geo-shell> **map add layer** --name map --layer polys

Added polys layer to map map

geo-shell> **map add layer** --name map --layer points

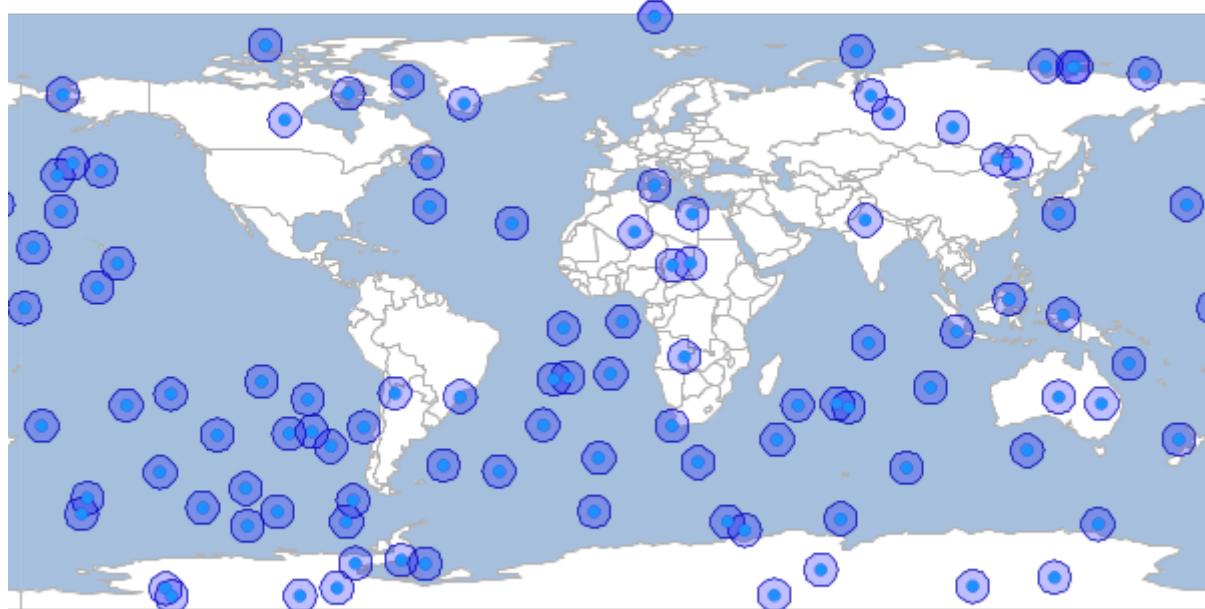

Added points layer to map map

geo-shell> **map draw** --name map --file examples/layer\_transform.png

Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer\_transform.png!

geo-shell> **map close** --name map

Map map closed!

## Union

Union a Layer with another Layer

geo-shell> **layer union** --input-name a --other-name b --output-workspace results --output-name results

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
other-name	The other Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
postfix-all	Whether to postfix all field names when combining schemas	false	false	false
include-duplicates	Whether to include duplicate field names	false	true	true

geo-shell> **workspace open** --name layers --params src/test/resources/layeralgebra.gpkg  
Workspace layers opened!

geo-shell> **workspace open** --name results --params memory  
Workspace results opened!

geo-shell> **layer open** --workspace layers --layer a --name a  
Opened Workspace layers Layer a as a

geo-shell> **layer open** --workspace layers --layer b --name b  
Opened Workspace layers Layer b as b

geo-shell> **layer union** --input-name a --other-name b --output-workspace results --output-name results  
Done unioning a and b to create results!

geo-shell> **style vector default** --layer a --color red --opacity 0.75 --file examples/red.sld  
Default Vector Style for a written to /home/runner/work/geo-shell/geo-shell/examples/red.sld!

geo-shell> **style vector default** --layer b --color green --opacity 0.75 --file examples/green.sld  
Default Vector Style for b written to /home/runner/work/geo-shell/geo-shell/examples/green.sld!

geo-shell> **style vector default** --layer results --color blue --opacity 0.75 --file examples/blue.sld  
Default Vector Style for results written to /home/runner/work/geo-shell/geo-shell/examples/blue.sld!

geo-shell> **layer style set** --name a --style examples/red.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/red.sld set on a

geo-shell> **layer style set** --name b --style examples/green.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/green.sld set on b

```
geo-shell> layer style set --name results --style examples/blue.sld
Style /home/runner/work/geo-shell/geo-shell/examples/blue.sld set on results
```

```
geo-shell> map open --name map
Map map opened!
```

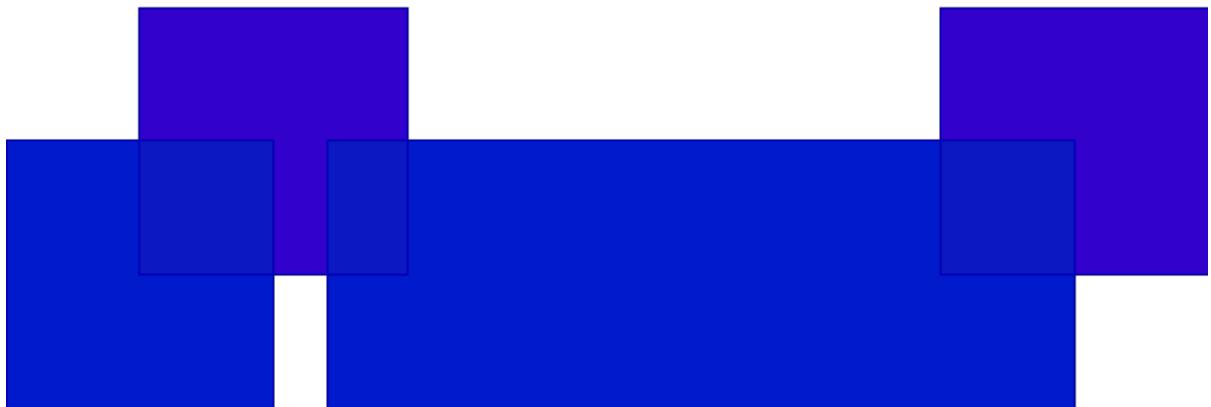

```
geo-shell> map add layer --name map --layer a
Added a layer to map map
```

```
geo-shell> map add layer --name map --layer b
Added b layer to map map
```

```
geo-shell> map add layer --name map --layer results
Added results layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_union.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_union.png!
```

```
geo-shell> map close --name map
Map map closed!
```

## Update

Calculate the update between a Layer with another Layer

```
geo-shell> layer update --input-name a --other-name b --output-workspace results --output-name
results
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
other-name	The other Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		

geo-shell> **workspace open** --name layers --params src/test/resources/layeralgebra.gpkg  
Workspace layers opened!

geo-shell> **workspace open** --name results --params memory  
Workspace results opened!

geo-shell> **layer open** --workspace layers --layer a --name a  
Opened Workspace layers Layer a as a

geo-shell> **layer open** --workspace layers --layer b --name b  
Opened Workspace layers Layer b as b

geo-shell> **layer update** --input-name a --other-name b --output-workspace results --output-name results  
Done calculating the update between a and b to create results!

geo-shell> **style vector default** --layer a --color red --opacity 0.75 --file examples/red.sld  
Default Vector Style for a written to /home/runner/work/geo-shell/geo-shell/examples/red.sld!

geo-shell> **style vector default** --layer b --color green --opacity 0.75 --file examples/green.sld  
Default Vector Style for b written to /home/runner/work/geo-shell/geo-shell/examples/green.sld!

geo-shell> **style vector default** --layer results --color blue --opacity 0.75 --file examples/blue.sld  
Default Vector Style for results written to /home/runner/work/geo-shell/geo-shell/examples/blue.sld!

geo-shell> **layer style set** --name a --style examples/red.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/red.sld set on a

geo-shell> **layer style set** --name b --style examples/green.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/green.sld set on b

geo-shell> **layer style set** --name results --style examples/blue.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/blue.sld set on results

geo-shell> **map open** --name map  
Map map opened!

geo-shell> **map add layer** --name map --layer a  
Added a layer to map map

```
geo-shell> map add layer --name map --layer b
```

```
Added b layer to map map
```

```
geo-shell> map add layer --name map --layer results
```

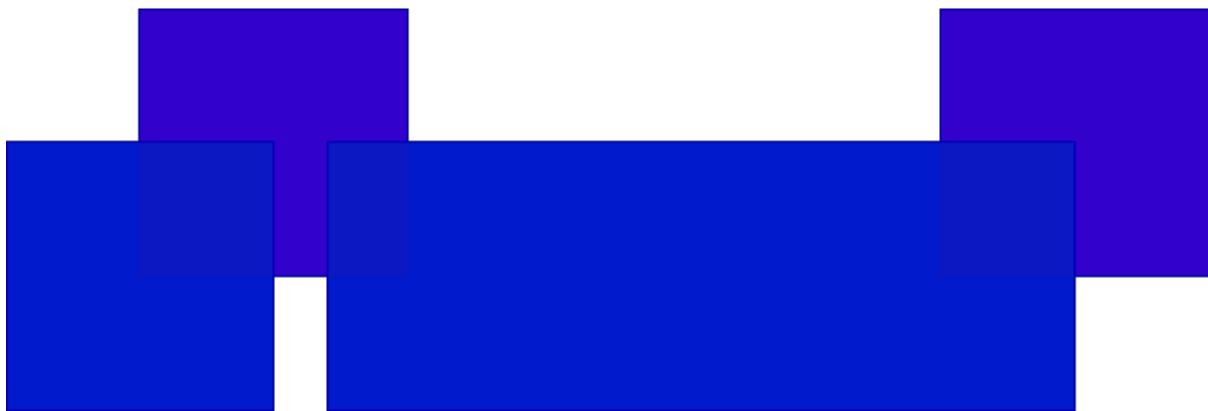

```
Added results layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_update.png
```

```
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_update.png!
```

```
geo-shell> map close --name map
```

```
Map map closed!
```

## Voronoi

Calculate a voronoi diagram of the input Layer and save it to the output Layer.

```
geo-shell> layer voronoi --input-name places --output-workspace layers --output-name voronoi
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
geometry-field	The geometry field name	false	the_geom	the_geom

```
geo-shell> workspace open --name layers --params memory
```

Workspace layers opened!

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer open --workspace naturalearth --layer places --name places
```

Opened Workspace naturalearth Layer places as places

```
geo-shell> layer voronoi --input-name places --output-workspace layers --output-name voronoi
```

Done!

```
geo-shell> style vector default --layer voronoi --color #1E90FF --opacity 0.25 --file examples/voronoi.sld
```

Default Vector Style for voronoi written to /home/runner/work/geo-shell/geo-shell/examples/voronoi.sld!

```
geo-shell> layer style set --name voronoi --style examples/voronoi.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/voronoi.sld set on voronoi

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Opened Workspace naturalearth Layer countries as countries

```
geo-shell> layer style set --name countries --style examples/countries.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
```

Opened Workspace naturalearth Layer ocean as ocean

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

```
geo-shell> map open --name map
```

Map map opened!

```
geo-shell> map add layer --name map --layer ocean
```

Added ocean layer to map map

```
geo-shell> map add layer --name map --layer countries
```

Added countries layer to map map

```
geo-shell> map add layer --name map --layer voronoi
```

Added voronoi layer to map map

Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer\_voronoi.png!

```
geo-shell> map draw --name map --file examples/layer_voronoi.png --bounds -180,-90,180,90
```

Map map closed!

```
geo-shell> map close --name map
```

## Random Points

Create a Layer with a number of randomly located points

```
geo-shell> layer random --output-workspace layers --output-name points --geometry -180,-90,180,90  
--number 100 --projection EPSG:4326
```

Name	Description	Mandatory	Specified Default	Unspecified Default
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
number	The number of points	true		
geometry	The geometry or bounds in which to create the points	true		
projection	The projection	true		
id-field	The id field name	false	id	id
geometry-field	The geometry field name	false	the_geom	the_geom
grid	Whether to create points in a grid	false	false	false

constrained-to-circle	Whether points should be constrained to a circle	false	false	false
gutter-fraction	The size of gutter between cells	false	0	0

geo-shell> **workspace open** --name layers --params memory  
 Workspace layers opened!

geo-shell> **layer random** --output-workspace layers --output-name points --geometry -180,-90,180,90  
 --number 100 --projection EPSG:4326  
 Done!

geo-shell> **style vector default** --layer points --color #1E90FF --file examples/points.sld  
 Default Vector Style for points written to /home/runner/work/geo-shell/geo-shell/examples/points.sld!

geo-shell> **layer style set** --name points --style examples/points.sld  
 Style /home/runner/work/geo-shell/geo-shell/examples/points.sld set on points

geo-shell> **workspace open** --name naturalearth --params examples/naturalearth.gpkg  
 Workspace naturalearth opened!

geo-shell> **layer open** --workspace naturalearth --layer countries --name countries

geo-shell> **map draw** --name randomMap --file examples/random\_points.png  
 Done drawing /home/runner/work/geo-shell/geo-shell/examples/random\_points.png!

```
geo-shell> map close --name randomMap  
Map randomMap closed!
```

## Buffer

Buffer the input Layer to the output Layer.

```
geo-shell> layer buffer --input-name points --output-workspace layers --output-name buffers  
--distance 10
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
distance	The buffer distance	true		

```
geo-shell> workspace open --name layers --params memory  
Workspace layers opened!
```

```
geo-shell> layer random --output-workspace layers --output-name points --geometry -180,-90,180,90  
--number 100 --projection EPSG:4326  
Done!
```

```
geo-shell> layer buffer --input-name points --output-workspace layers --output-name buffers  
--distance 10  
Done!
```

```
geo-shell> style vector default --layer points --color #1E90FF --file examples/points.sld  
Default Vector Style for points written to /home/runner/work/geo-shell/geo-  
shell/examples/points.sld!
```

```
geo-shell> style vector default --layer buffers --color #1E90FF --opacity 0.25 --file  
examples/buffers.sld  
Default Vector Style for buffers written to /home/runner/work/geo-shell/geo-  
shell/examples/buffers.sld!
```

```
geo-shell> layer style set --name points --style examples/points.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/points.sld set on points
```

```
geo-shell> layer style set --name buffers --style examples/buffers.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/buffers.sld set on buffers
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg  
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer style set --name ocean --style examples/ocean.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map open --name map  
Map map opened!
```

```
geo-shell> map add layer --name map --layer ocean  
Added ocean layer to map map
```

```
geo-shell> map add layer --name map --layer countries  
Added countries layer to map map
```

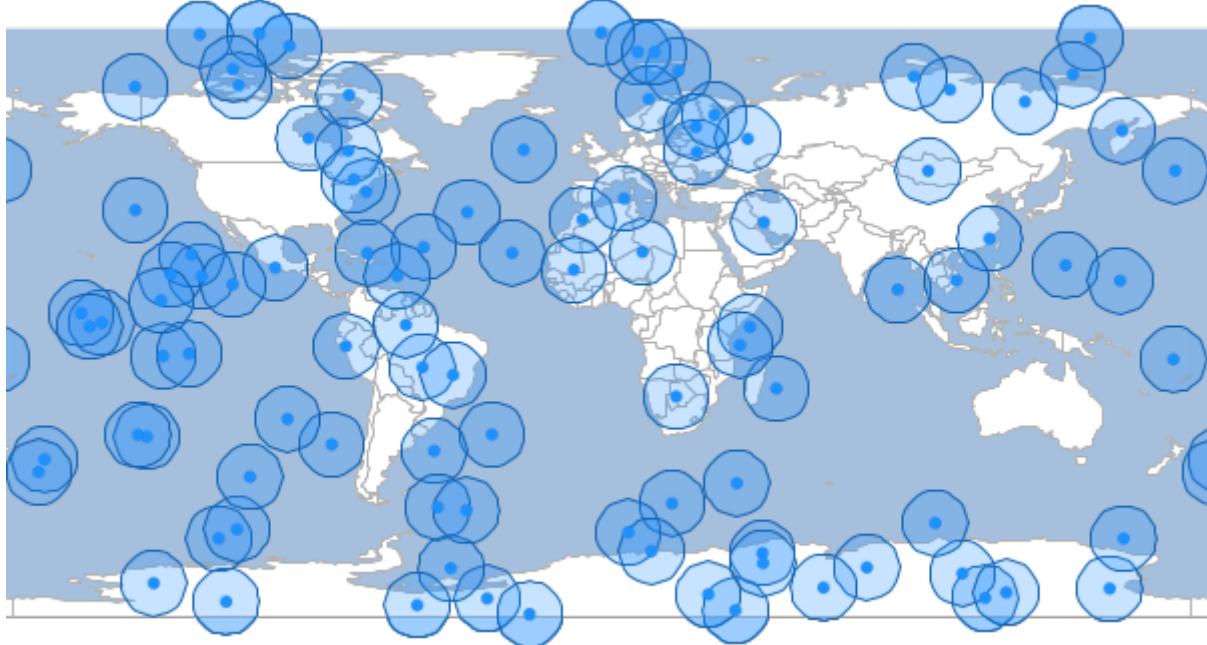

```
geo-shell> map add layer --name map --layer buffers  
Added buffers layer to map map
```

```
geo-shell> map add layer --name map --layer points  
Added points layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_buffer.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_buffer.png!
```

```
geo-shell> map close --name map
```

```
Map map closed!
```

## Centroid

Calculate the centroids of the input Layer to the output Layer.

```
geo-shell> layer centroid --input-name countries --output-name centroids --output-workspace layers
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		

```
geo-shell> workspace open --name layers --params memory
```

```
Workspace layers opened!
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

```
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

```
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld
```

```
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer centroid --input-name countries --output-name centroids --output-workspace layers  
Done!
```

```
geo-shell> style vector default --layer centroids --color #1E90FF --file examples/centroids.sld  
Default Vector Style for centroids written to /home/runner/work/geo-shell/geo-shell/examples/centroids.sld!
```

```
geo-shell> layer style set --name centroids --style examples/centroids.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/centroids.sld set on centroids
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer style set --name ocean --style examples/ocean.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map open --name map  
Map map opened!
```

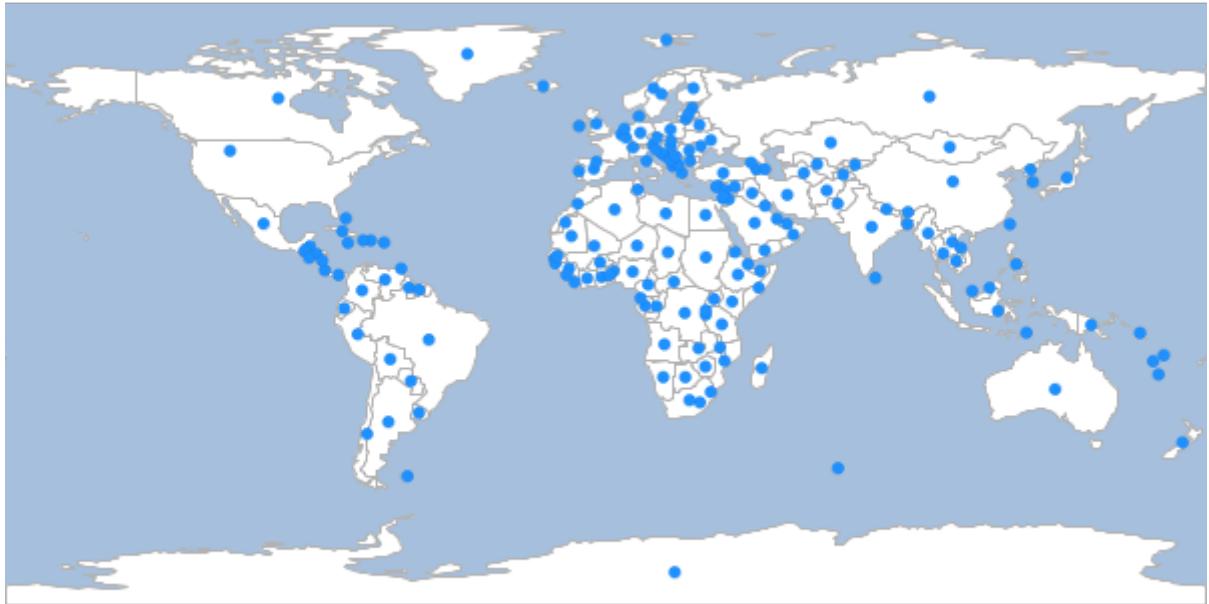

```
geo-shell> map add layer --name map --layer ocean  
Added ocean layer to map map
```

```
geo-shell> map add layer --name map --layer countries  
Added countries layer to map map
```

```
geo-shell> map add layer --name map --layer centroids  
Added centroids layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_centroid.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_centroid.png!
```

```
geo-shell> map close --name map  
Map map closed!
```

## Interior Point

Calculate the interior points of the input Layer to the output Layer.

```
geo-shell> layer interiorpoint --input-name countries --output-name interiorpoints --output
-workspace layers
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer interiorpoint --input-name countries --output-name interiorpoints --output
```

-workspace layers

Done!

```
geo-shell> style vector default --layer interiorpoints --color #1E90FF --file examples/interiorpoints.sld
```

Default Vector Style for interiorpoints written to /home/runner/work/geo-shell/geo-shell/examples/interiorpoints.sld!

```
geo-shell> layer style set --name interiorpoints --style examples/interiorpoints.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/interiorpoints.sld set on interiorpoints

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
```

Opened Workspace naturalearth Layer ocean as ocean

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

```
geo-shell> map open --name map
```

Map map opened!

```
geo-shell> map add layer --name map --layer ocean
```

Added ocean layer to map map

```
geo-shell> map add layer --name map --layer countries
```

Added countries layer to map map

```
geo-shell> map add layer --name map --layer interiorpoints
```

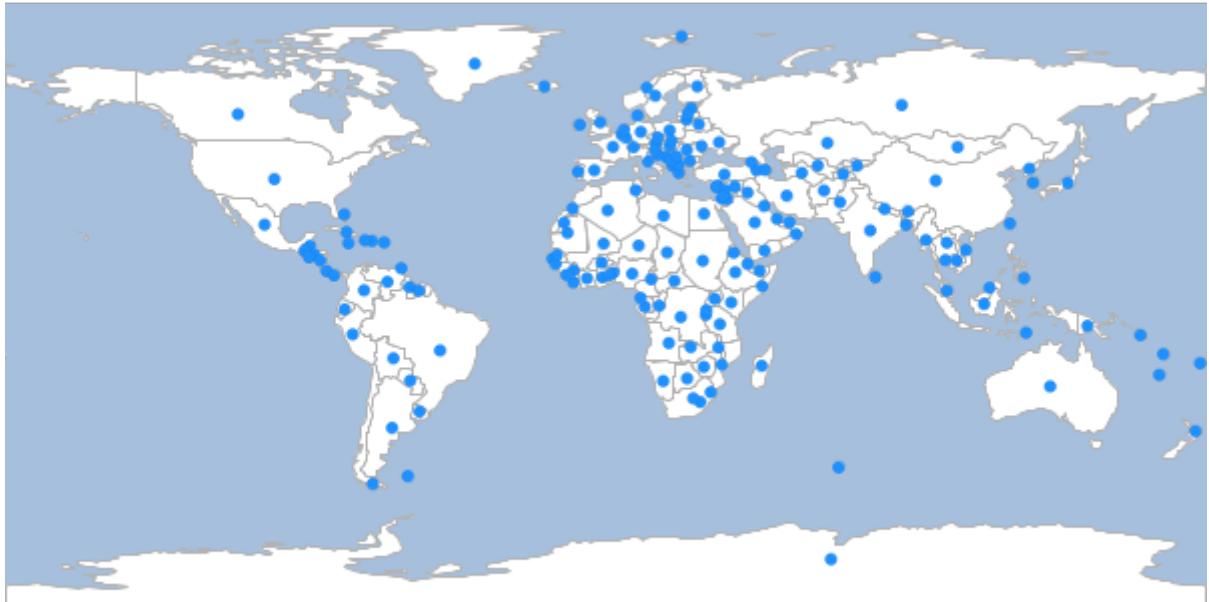

Added interiorpoints layer to map map

```
geo-shell> map draw --name map --file examples/layer_interiorpoint.png
```

Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer\_interiorpoint.png!

```
geo-shell> map close --name map
```

Map map closed!

## Extent

Calculate the extent of the input Layer and save it to the output Layer.

```
geo-shell> layer extent --input-name states --output-workspace layers --output-name usa
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
geometry-field	The geometry field name	false	the_geom	the_geom

```
geo-shell> workspace open --name layers --params memory
```

Workspace layers opened!

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer style set --name states --style examples/states.sld
```

Unable to find Layer states

```
geo-shell> layer open --workspace naturalearth --layer states --name states
```

Opened Workspace naturalearth Layer states as states

```
geo-shell> layer extent --input-name states --output-workspace layers --output-name usa  
Done!
```

```
geo-shell> style vector default --layer usa --color #1E90FF --opacity 0.25 --file examples/extent.sld  
Default Vector Style for usa written to /home/runner/work/geo-shell/geo-shell/examples/extent.sld!
```

```
geo-shell> layer style set --name usa --style examples/extent.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/extent.sld set on usa
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer style set --name ocean --style examples/ocean.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map open --name map  
Map map opened!
```

```
geo-shell> map add layer --name map --layer ocean  
Added ocean layer to map map
```

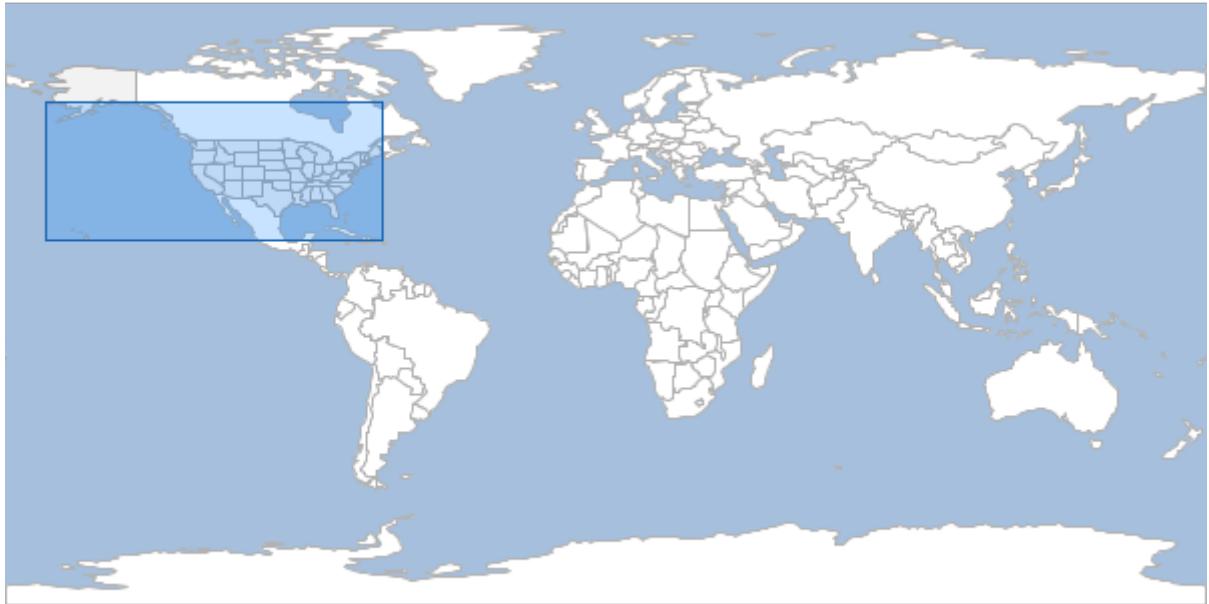

```
geo-shell> map add layer --name map --layer countries  
Added countries layer to map map
```

```
geo-shell> map add layer --name map --layer states  
Added states layer to map map
```

```
geo-shell> map add layer --name map --layer usa  
Added usa layer to map map
```

```
geo-shell> map draw --name map --file examples/layer_extent.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_extent.png!
```

```
geo-shell> map close --name map  
Map map closed!
```

## Extents

Calculate the extents of each Feature in the input Layer and save them to the output Layer.

```
geo-shell> layer extents --input-name states --output-workspace layers --output-name state_extents
```

Name	Description	Mandatory	Specified Default	Unspecified Default
input-name	The Layer name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer style set --name states --style examples/states.sld
Unable to find Layer states
```

```
geo-shell> layer open --workspace naturalearth --layer states --name states
Opened Workspace naturalearth Layer states as states
```

```
geo-shell> layer extents --input-name states --output-workspace layers --output-name state_extents
Done!
```

```
geo-shell> style vector default --layer state_extents --color #1E90FF --opacity 0.25 --file examples/extent.sld
Default Vector Style for state_extents written to /home/runner/work/geo-shell/geo-shell/examples/extent.sld!

geo-shell> layer style set --name state_extents --style examples/extent.sld
Style /home/runner/work/geo-shell/geo-shell/examples/extent.sld set on state_extents

geo-shell> layer open --workspace naturalearth --layer countries --name countries
Opened Workspace naturalearth Layer countries as countries

geo-shell> layer style set --name countries --style examples/countries.sld
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries

geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
Opened Workspace naturalearth Layer ocean as ocean

geo-shell> layer style set --name ocean --style examples/ocean.sld
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

geo-shell> map open --name map
Map map opened!

geo-shell> map add layer --name map --layer ocean
Added ocean layer to map map

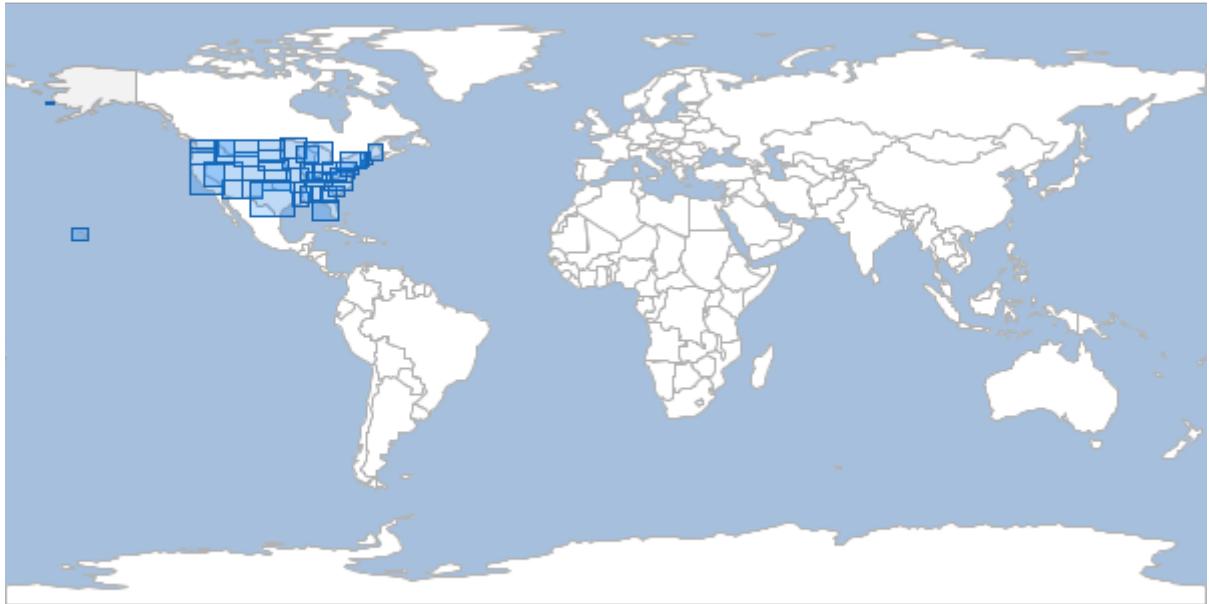

geo-shell> map add layer --name map --layer countries
Added countries layer to map map

geo-shell> map add layer --name map --layer states
Added states layer to map map

geo-shell> map add layer --name map --layer state_extents
Added state_extents layer to map map

geo-shell> map draw --name map --file examples/layer_extents.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/layer_extents.png!

geo-shell> map close --name map
Map map closed!
```

## Graticule

### Square

Create a square graticule.

```
geo-shell> layer graticule square --workspace layers --name squares --bounds -180,-90,180,90
--length 20
```

Name	Description	Mandatory	Specified Default	Unspecified Default
workspace	The Workspace name	true		
name	The new Layer name	true		
bounds	The bounds	true		
length	The length	true		
spacing	The spacing	false	-1	-1

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> layer graticule square --workspace layers --name squares --bounds -180,-90,180,90
--length 20
Created Square Graticule Layer squares!
```

```
geo-shell> style vector default --layer squares --color #1E90FF --opacity 0.30 --file examples/squares.sld
Default Vector Style for squares written to /home/runner/work/geo-shell/geo-shell/examples/squares.sld!

geo-shell> layer style set --name squares --style examples/squares.sld
Style /home/runner/work/geo-shell/geo-shell/examples/squares.sld set on squares

geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!

geo-shell> layer open --workspace naturalearth --layer countries --name countries
Opened Workspace naturalearth Layer countries as countries

geo-shell> layer style set --name countries --style examples/countries.sld
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries

geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
Opened Workspace naturalearth Layer ocean as ocean

geo-shell> layer style set --name ocean --style examples/ocean.sld
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

geo-shell> map open --name graticule
Map graticule opened!

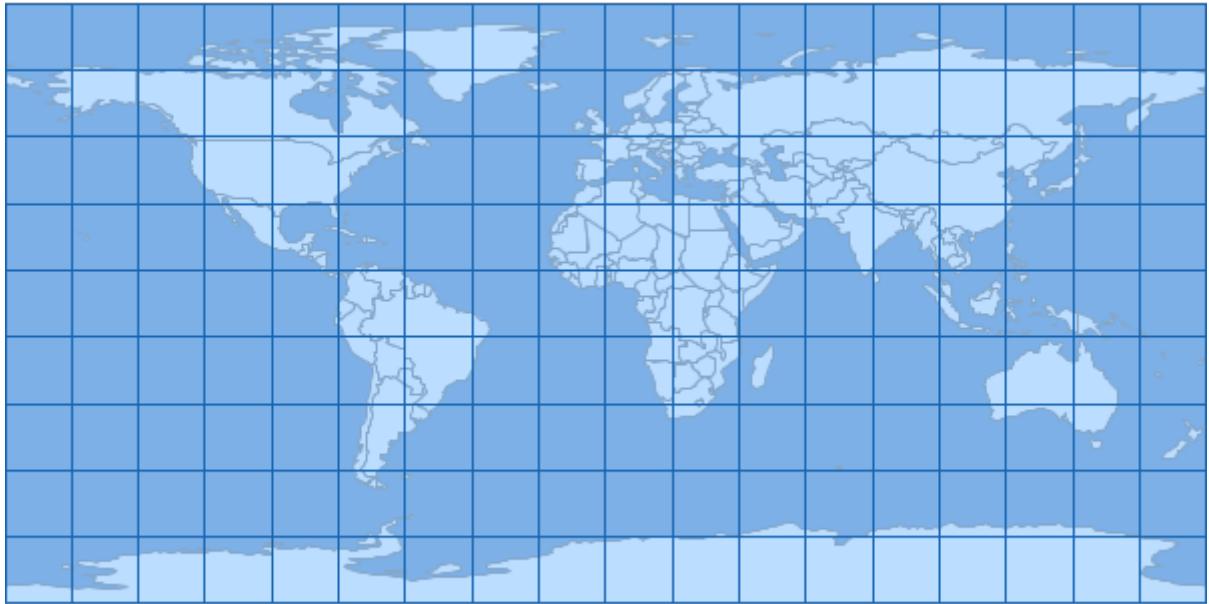

geo-shell> map add layer --name graticule --layer ocean
Added ocean layer to map graticule

geo-shell> map add layer --name graticule --layer countries
Added countries layer to map graticule

geo-shell> map add layer --name graticule --layer squares
Added squares layer to map graticule

geo-shell> map draw --name graticule --file examples/square_graticules.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/square_graticules.png!

geo-shell> map close --name graticule
Map graticule closed!
```

## Rectangle

Create a rectangle graticule.

```
geo-shell> layer graticule rectangle --workspace layers --name rectangles --bounds -180,-90,180,90
--width 20 --height 10
```

Name	Description	Mandatory	Specified Default	Unspecified Default
workspace	The Workspace name	true		
name	The new Layer name	true		
bounds	The bounds	true		
width	The width	true		
height	The height	true		
spacing	The spacing	false	-1	-1

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> layer graticule rectangle --workspace layers --name rectangles --bounds -180,-90,180,90
--width 20 --height 10
Created Rectangle Graticule Layer rectangles!
```

```
geo-shell> style vector default --layer rectangles --color #1E90FF --opacity 0.30 --file
```

```
examples/rectangles.sld
Default Vector Style for rectangles written to /home/runner/work/geo-shell/geo-shell/examples/rectangles.sld!
```

```
geo-shell> layer style set --name rectangles --style examples/rectangles.sld
Style /home/runner/work/geo-shell/geo-shell/examples/rectangles.sld set on rectangles
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map open --name graticule
Map graticule opened!
```

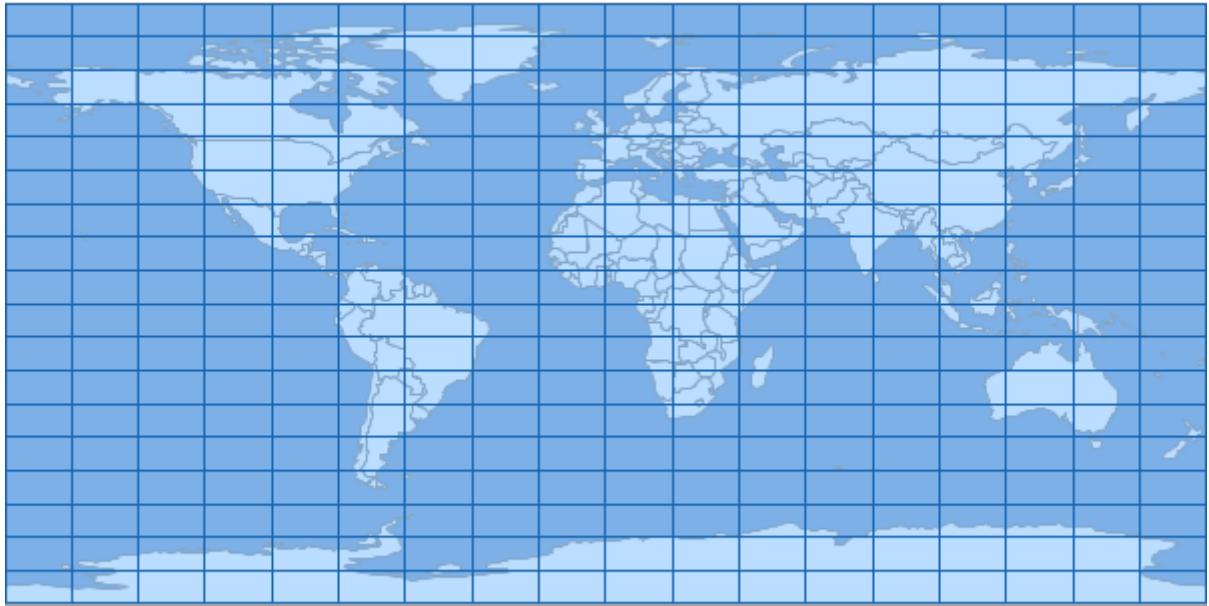

```
geo-shell> map add layer --name graticule --layer ocean
Added ocean layer to map graticule
```

```
geo-shell> map add layer --name graticule --layer countries
Added countries layer to map graticule
```

```
geo-shell> map add layer --name graticule --layer rectangles
Added rectangles layer to map graticule
```

```
geo-shell> map draw --name graticule --file examples/rectangle_graticules.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/rectangle_graticules.png!
```

```
geo-shell> map close --name graticule
Map graticule closed!
```

## Oval

Create a oval graticule.

```
geo-shell> layer graticule oval --workspace layers --name ovals --bounds -180,-90,180,90 --size 20
```

Name	Description	Mandatory	Specified Default	Unspecified Default
workspace	The Workspace name	true		
name	The new Layer name	true		
bounds	The bounds	true		
size	The size	true		

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> layer graticule oval --workspace layers --name ovals --bounds -180,-90,180,90 --size 20
Created Oval Graticule Layer ovals!
```

```
geo-shell> style vector default --layer ovals --color #1E90FF --opacity 0.30 --file examples/ovals.sld
Default Vector Style for ovals written to /home/runner/work/geo-shell/geo-shell/examples/ovals.sld!
```

```
geo-shell> layer style set --name ovals --style examples/ovals.sld
Style /home/runner/work/geo-shell/geo-shell/examples/ovals.sld set on ovals
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map open --name graticule
Map graticule opened!
```

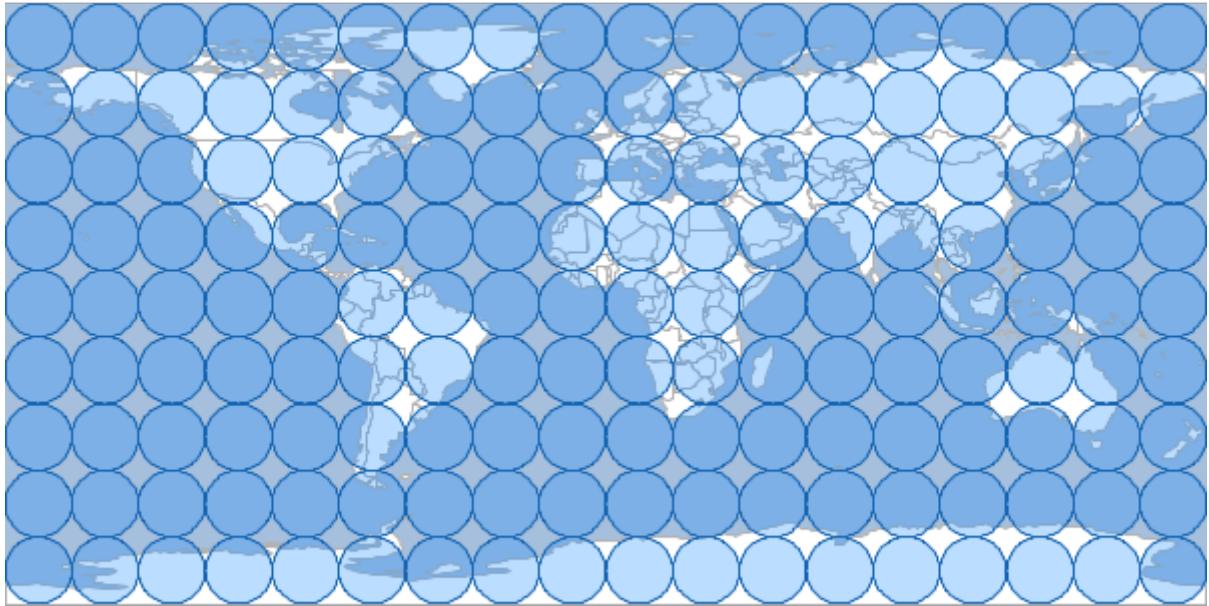

```
geo-shell> map add layer --name graticule --layer ocean
Added ocean layer to map graticule
```

```
geo-shell> map add layer --name graticule --layer countries
Added countries layer to map graticule
```

```
geo-shell> map add layer --name graticule --layer ovals
Added ovals layer to map graticule
```

```
geo-shell> map draw --name graticule --file examples/oval_graticules.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/oval_graticules.png!
```

```
geo-shell> map close --name graticule
Map graticule closed!
```

## Hexagon

Create a hexagon graticule.

```
geo-shell> layer graticule hexagon --workspace layers --name hexagons --bounds -180,-90,180,90
--length 10
```

Name	Description	Mandatory	Specified Default	Unspecified Default
workspace	The Workspace name	true		
name	The new Layer name	true		
bounds	The bounds	true		
length	The length	true		
spacing	The spacing	false	5	5
orientation	The orientation (flat or angled)	false	flat	flat

```
geo-shell> workspace open --name layers --params memory
Workspace layers opened!
```

```
geo-shell> layer graticule hexagon --workspace layers --name hexagons --bounds -180,-90,180,90
--length 10
Created Hexagon Graticule Layer hexagons!
```

```
geo-shell> style vector default --layer hexagons --color #1E90FF --opacity 0.30 --file examples/hexagons.sld
Default Vector Style for hexagons written to /home/runner/work/geo-shell/geo-shell/examples/hexagons.sld!

geo-shell> layer style set --name hexagons --style examples/hexagons.sld
Style /home/runner/work/geo-shell/geo-shell/examples/hexagons.sld set on hexagons

geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!

geo-shell> layer open --workspace naturalearth --layer countries --name countries
Opened Workspace naturalearth Layer countries as countries

geo-shell> layer style set --name countries --style examples/countries.sld
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries

geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
Opened Workspace naturalearth Layer ocean as ocean

geo-shell> layer style set --name ocean --style examples/ocean.sld
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

geo-shell> map open --name graticule
Map graticule opened!

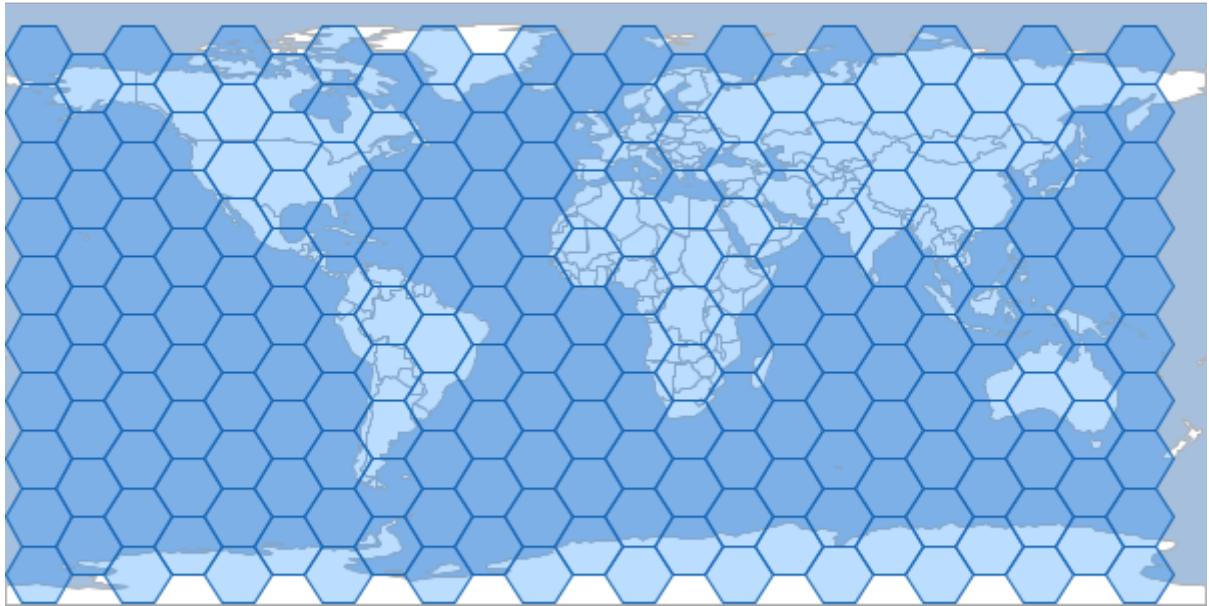

geo-shell> map add layer --name graticule --layer ocean
Added ocean layer to map graticule

geo-shell> map add layer --name graticule --layer countries
Added countries layer to map graticule

geo-shell> map add layer --name graticule --layer hexagons
Added hexagons layer to map graticule

geo-shell> map draw --name graticule --file examples/hexagon_graticules.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/hexagon_graticules.png!

geo-shell> map close --name graticule
Map graticule closed!
```

# Format

## Open

Open a Raster Format.

```
geo-shell> format open --name earth --input src/test/resources/earth.tif
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Format name	false		
input	The input string	true		

```
geo-shell> format open --name earth --input src/test/resources/earth.tif  
Format earth opened!
```

```
geo-shell> format close --name earth
```

```
Format earth closed!
```

## List

List open Raster Formats.

```
geo-shell> format list
```

No parameters

```
geo-shell> format open --name earth --input src/test/resources/earth.tif  
Format earth opened!
```

```

```

```
geo-shell> format close --name earth
```

```
Format earth closed!
```

```
geo-shell> format close --name raster
```

```
Format raster closed!
```

## Close

Close a Raster Format.

```
geo-shell> format close --name earth
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Format name	true		

```
geo-shell> format open --name earth --input src/test/resources/earth.tif  
Format earth opened!
```

```
geo-shell> format close --name earth
```

```
Format earth closed!
```

## Rasters

List the Rasters in a Format.

```
geo-shell> format rasters --name earth
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Format name	true		

```
geo-shell> format open --name earth --input src/test/resources/earth.tif  
Format earth opened!
```

```
geo-shell> format rasters --name earth
```

```
earth
```

```
geo-shell> format close --name earth
```

Format earth closed!

# Raster

## Open

Open a Raster.

```
geo-shell> raster open --format earth --raster earth --name earth
```

Name	Description	Mandatory	Specified Default	Unspecified Default
format	The Format name	true		
raster	The Raster name	true		
name	The name	false		

```
geo-shell> format open --name earth --input src/test/resources/earth.tif
```

Format earth opened!

```
geo-shell> raster open --format earth --raster earth --name earth
```

Opened Format earth Raster earth as earth

```
geo-shell> raster close --name earth
```

Raster earth closed!

```
geo-shell> format close --name earth
```

Format earth closed!

## Close

Close a Raster.

```
geo-shell> raster close --name earth
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		

```
geo-shell> format open --name earth --input src/test/resources/earth.tif

band	The x coordinate	false	0	0
x	The x coordinate	true		
y	The y coordinate	true		
type	The y coordinate	false	geometry	geometry

```

geo-shell> format open --name earth --input src/test/resources/earth.tif
Format earth opened!

```

```

geo-shell> raster open --format earth --raster earth --name earth
Opened Format earth Raster earth as earth

```

```

geo-shell> raster value --name earth --x 60 --y 45
235.0

```

```
geo-shell> raster value --name earth --x 10 --y 15 --type pixel  
109.0
```

```
geo-shell> raster close --name earth  
Raster earth closed!
```

```
geo-shell> format close --name earth  
Format earth closed!
```

## Envelope

Create a Vector Layer from the envelope of a Raster.

```
geo-shell> raster envelope --name earth --output-workspace layers --output-name outline
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		

```
geo-shell> format open --name earth --input src/test/resources/earth.tif  
Format earth opened!
```

```
geo-shell> raster open --format earth --raster earth --name earth  
Opened Format earth Raster earth as earth
```

```
geo-shell> workspace open --name layers --params memory  
Workspace layers opened!
```

```
geo-shell> raster envelope --name earth --output-workspace layers --output-name outline  
Done creating envelope in outline from earth!
```

```
geo-shell> style create --params "stroke=black stroke-width=3" --file examples/outline.sld  
Style      stroke=black      stroke-width=3      written      to      /home/runner/work/geo-shell/geo-shell/examples/outline.sld!
```

```
geo-shell> layer style set --name outline --style examples/outline.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/outline.sld set on outline
```

```
geo-shell> map open --name map  
Map map opened!
```

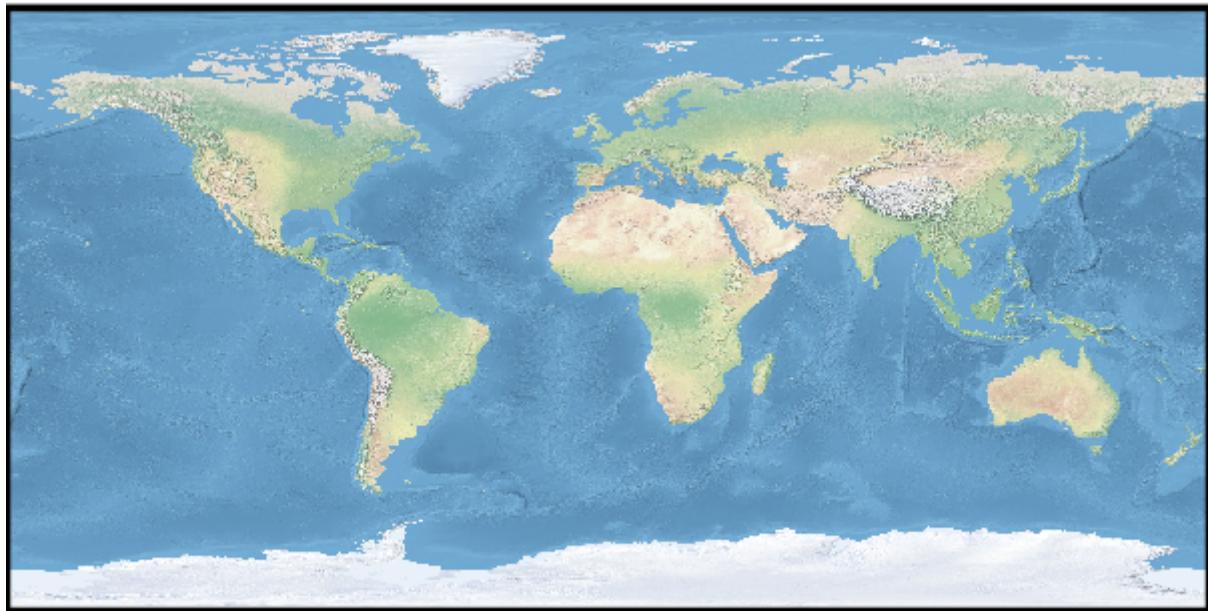

```
geo-shell> map add raster --name map --raster earth  
Added earth layer to map map
```

```
geo-shell> map add layer --name map --layer outline
```

Added outline layer to map map

```
geo-shell> map draw --name map --file examples/raster_envelope.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster_envelope.png!
```

```
geo-shell> map close --name map  
Map map closed!
```

## Get Style

Get the Raster's style.

```
geo-shell> raster style get --name pc --style examples/pc_style.sld
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
style	The SLD File	false		

```
geo-shell> format open --name pierce_county --input src/test/resources/pc.tif  
Format pierce_county opened!
```

```
geo-shell> raster open --format pierce_county --raster pc --name pc  
Opened Format pierce_county Raster pc as pc
```

```
geo-shell>      style      raster      colormap      --raster      pc      --values  
"25=#9fd182,470=#3e7f3c,920=#133912,1370=#08306b,1820=#fffff5"  
examples/style_raster_colormap.sld      -file
```

```
Colormap Raster Style for pc written to /home/runner/work/geo-shell/geo-shell/examples/style_raster_colormap.sld!
```

```
geo-shell> raster style set --name pc --style examples/style_raster_colormap.sld
Style /home/runner/work/geo-shell/geo-shell/examples/style_raster_colormap.sld set on pc
```

```
geo-shell> map open --name map
```

```
Map map opened!
```

```
geo-shell> map add raster --name map --raster pc
```

```
Added pc layer to map map
```

```
geo-shell> map draw --name map --file examples/raster_style_get.png
```

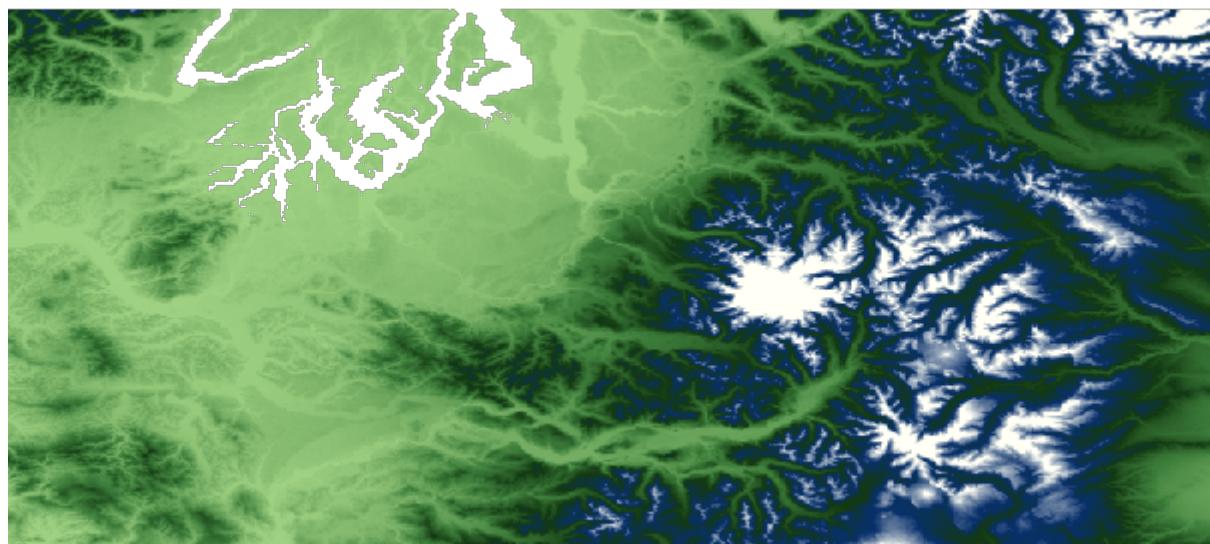

```
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster_style_get.png!
```

```
geo-shell> map close --name map
```

```
Map map closed!
```

```
geo-shell> raster style get --name pc --style examples/pc_style.sld
```

```
pc style written to /home/runner/work/geo-shell/geo-shell/examples/pc_style.sld
```

## Set Style

Set a Raster's style

```
geo-shell> raster style set --name pc --style examples/style_raster_colormap.sld
```

Name	Description	Mandatory	Specified Default	Unspecified Default

<b>name</b>	The Raster name	true		
<b>style</b>	The SLD or CSS File	true		

geo-shell> **format open** --name pierce\_county --input src/test/resources/pc.tif  
Format pierce\_county opened!

geo-shell> **raster open** --format pierce\_county --raster pc --name pc  
Opened Format pierce\_county Raster pc as pc

geo-shell>       **style**       **raster**       **colormap**       **--raster**       **pc**       **--values**  
"25=#9fd182,470=#3e7f3c,920=#133912,1370=#08306b,1820=#fffff5"  
**examples/style\_raster\_colormap.sld**  
Colormap   Raster   Style   for   pc   written   to   /home/runner/work/geo-shell/geo-shell/examples/style\_raster\_colormap.sld!

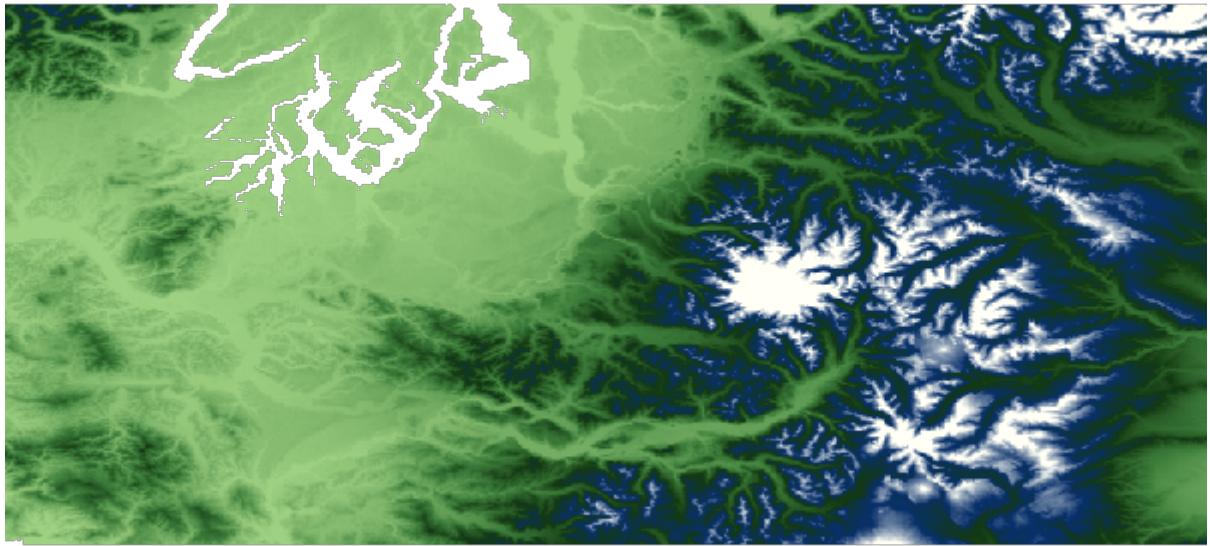

geo-shell> **raster style set** --name pc --style examples/style\_raster\_colormap.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/style\_raster\_colormap.sld set on pc

geo-shell> **map open** --name map  
Map map opened!

geo-shell> **map add raster** --name map --raster pc  
Added pc layer to map map

geo-shell> **map draw** --name map --file examples/raster\_style\_set.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster\_style\_set.png!

geo-shell> **map close** --name map  
Map map closed!

## Add Raster

Add two Rasters together

```
geo-shell> raster add raster --name1 high --name2 low --output-format add --output-name add
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name1	The Raster name	true		
name2	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		

```
geo-shell> format open --name high --input src/test/resources/high.tif  
Format high opened!
```

```
geo-shell> raster open --format high --raster high --name high  
Opened Format high Raster high as high
```

```
geo-shell> workspace open --name layers --params memory  
Workspace layers opened!
```

```
geo-shell> style create --params "stroke=black stroke-width=2 label=value label-size=12" --file  
examples/grid.sld  
Style stroke=black stroke-width=2 label=value label-size=12 written to /home/runner/work/geo-
```

```
shell/geo-shell/examples/grid.sld!
```

```
geo-shell> raster polygon --name high --output-workspace layers --output-name high_polygons  
Done converting Raster high to a Polygon Layer high_polygons!
```

```
geo-shell> style raster palette colormap --min 1 --max 50 --palette MutedTerrain --number 20 --file  
examples/high.sld
```

```
Colormap Palette Raster Style written to /home/runner/work/geo-shell/geo-shell/examples/high.sld!
```

```
geo-shell> raster style set --name high --style examples/high.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/high.sld set on high
```

```
geo-shell> layer style set --name high_polygons --style examples/grid.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/grid.sld set on high_polygons
```

```
geo-shell> map open --name mapHigh  
Map mapHigh opened!
```

```
geo-shell> map add raster --name mapHigh --raster high  
Added high layer to map mapHigh
```

```
geo-shell> map add layer --name mapHigh --layer high_polygons  
Added high_polygons layer to map mapHigh
```

```
geo-shell> map draw --name mapHigh --file examples/raster_add_raster_high.png --bounds "-180,-  
90,180,90,EPNG:4326"  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster_add_raster_high.png!
```

```
geo-shell> map close --name mapHigh  
Map mapHigh closed!
```

17.0	18.0	19.0	20.0
13.0	14.0	15.0	16.0
9.0	10.0	11.0	12.0
5.0	6.0	7.0	8.0

```
geo-shell> format open --name low --input src/test/resources/low.tif
Format low opened!

geo-shell> raster open --format low --raster low --name low
Opened Format low Raster low as low

geo-shell> raster polygon --name low --output-workspace layers --output-name low_polygons
Done converting Raster low to a Polygon Layer low_polygons!

geo-shell> style raster palette colormap --min 1 --max 50 --palette MutedTerrain --number 20 --file
examples/low.sld
Colormap Palette Raster Style written to /home/runner/work/geo-shell/geo-shell/examples/low.sld!

geo-shell> raster style set --name low --style examples/low.sld

14.0	16.0	18.0	20.0
6.0	8.0	10.0	12.0

## Add Constant

Add constant values to a Raster

```
geo-shell> raster add constant --name pc --output-format pcAdd100 --output-name pcAdd100  
--values 100
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		
values	The values	true		

```
geo-shell> format open --name pierce_county --input src/test/resources/pc.tif  
Format pierce_county opened!
```

```
geo-shell> raster open --format pierce_county --raster pc --name pc  
Opened Format pierce_county Raster pc as pc
```

```
geo-shell> raster value --name pc --x -121.799927 --y 46.867703  
3069.0

geo-shell> format open --name pcAdd100 --input examples/pcAdd100.tif  
Format pcAdd100 opened!

geo-shell> raster add constant --name pc --output-format pcAdd100 --output-name pcAdd100  
--values 100  
Added 100 to pc to create pcAdd100!

geo-shell> raster value --name pcAdd100 --x -121.799927 --y 46.867703  
3169.0

geo-shell> style raster colormap --raster pcAdd100 --values  
"25=#9fd182,470=#3e7f3c,920=#133912,1370=#08306b,1820=#fffff5"  
--file examples/style_raster_colormap.sld  
Colormap Raster Style for pcAdd100 written to /home/runner/work/geo-shell/geo-  
shell/examples/style_raster_colormap.sld!

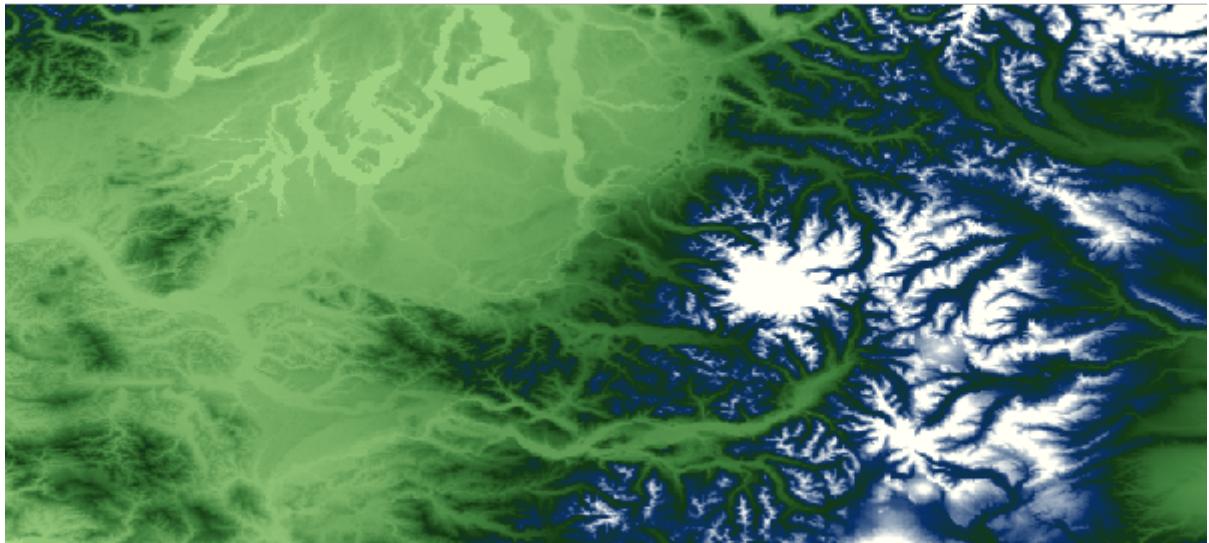

geo-shell> raster style set --name pcAdd100 --style examples/style_raster_colormap.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/style_raster_colormap.sld set on pcAdd100

geo-shell> map open --name map  
Map map opened!

geo-shell> map add raster --name map --raster pcAdd100  
Added pcAdd100 layer to map map

geo-shell> map draw --name map --file examples/raster_add_constant.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster_add_constant.png!

geo-shell> map close --name map  
Map map closed!
```

## Subtract Raster

Subtract one Raster from another

```
geo-shell> raster subtract raster --name1 high --name2 low --output-format subtract --output-name subtract
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name1	The Raster name	true		
name2	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		

```
geo-shell> format open --name high --input src/test/resources/high.tif  
Format high opened!
```

```
geo-shell> raster open --format high --raster high --name high  
Opened Format high Raster high as high
```

```

Map map closed!

## Crop

Crop a Raster.

```
geo-shell> raster crop --name earth --output-format earthCropped --output-name earthCropped  
--geometry "-160.927734,6.751896,-34.716797,57.279043"
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		
geometry	The geometry	true		

```
geo-shell> format open --name earth --input src/test/resources/earth.tif  
Format earth opened!
```

```
geo-shell> raster open --format earth --raster earth --name earth  
Opened Format earth Raster earth as earth
```

```
geo-shell> format open --name earthCropped --input examples/earthCropped.tif  
Format earthCropped opened!
```

```
geo-shell> raster crop --name earth --output-format earthCropped --output-name earthCropped  
--geometry "-160.927734,6.751896,-34.716797,57.279043"
```

Raster earth cropped to earthCropped!

```
geo-shell> map open --name map
```

Map map opened!

```
geo-shell> map add raster --name map --raster earthCropped
```

Added earthCropped layer to map map

```
geo-shell> map draw --name map --file examples/raster_crop.png
```

Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster\_crop.png!

```
geo-shell> map close --name map
```

Map map closed!

## Mosaic

Mosaic two Rasters together

```
geo-shell> raster mosaic --name1 alki2 --name2 alki3 --output-format mosaic --output-name mosaic
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name1	The Raster name	true		
name2	The Raster name	true		
output-format	The output Format Workspace	true		

output-name	The output Raster name	false		
-------------	------------------------	-------	--	--

geo-shell> **format open** --input examples/alki2.tif --name alki2  
Format alki2 opened!

geo-shell> **raster open** --format alki2 --raster alki2 --name alki2  
Opened Format alki2 Raster alki2 as alki2

geo-shell> **format open** --input examples/alki3.tif --name alki3  
Format alki3 opened!

geo-shell> **raster open** --format alki3 --raster alki3 --name alki3  
Opened Format alki3 Raster alki3 as alki3

geo-shell> **format open** --input examples/mosaic.tif --name mosaic  
Format mosaic opened!

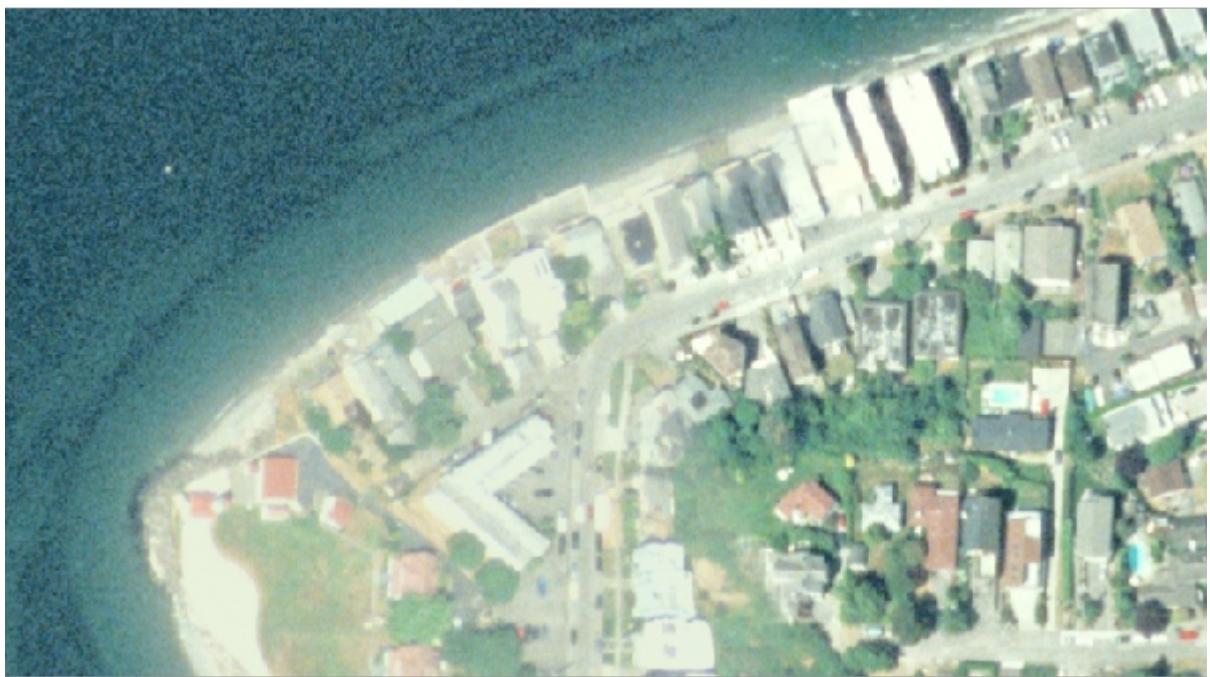

geo-shell> **raster mosaic** --name1 alki2 --name2 alki3 --output-format mosaic --output-name mosaic  
Mosaic alki2 and alki3 to create mosaic!

geo-shell> **map open** --name map  
Map map opened!

geo-shell> **map add raster** --name map --raster mosaic  
Added mosaic layer to map map

geo-shell> **map draw** --name map --file examples/raster\_mosaic.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster\_mosaic.png!

geo-shell> **map close** --name map  
Map map closed!

## Reclassify

Reclassify a Raster.

```
geo-shell> raster reclassify --name pc --output-format pcReclass --output-name pcReclass --ranges "0-0=1,0-50=2,50-200=3,200-1000=4,1000-1500=5,1500-4000=6"
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		
ranges	The comma delimited reclassification ranges (from- to=value)	true		
band	The Raster band to contour	false	0	0
nodata	The NODATA value	false	0	0

```
geo-shell> format open --name pc --input src/test/resources/pc.tif
```

Format pc opened!

```
geo-shell> raster open --format pc --raster pc --name pc  
Opened Format pc Raster pc as pc
```

```
geo-shell> format open --name pcReclass --input examples/pcReclass.tif  
Format pcReclass opened!
```

```
geo-shell> raster reclassify --name pc --output-format pcReclass --output-name pcReclass --ranges  
"0-0=1,0-50=2,50-200=3,200-1000=4,1000-1500=5,1500-4000=6"  
Raster pc reclassified to pcReclass!
```

```
geo-shell> style raster colormap --raster pcReclass --values  
"1=#9fd182,2=#3e7f3c,3=#133912,4=#08306b,5=#FFF8DC,6=#ffffff" --file examples/pcReclass.sld  
Colormap Raster Style for pcReclass written to /home/runner/work/geo-shell/geo-  
shell/examples/pcReclass.sld!
```

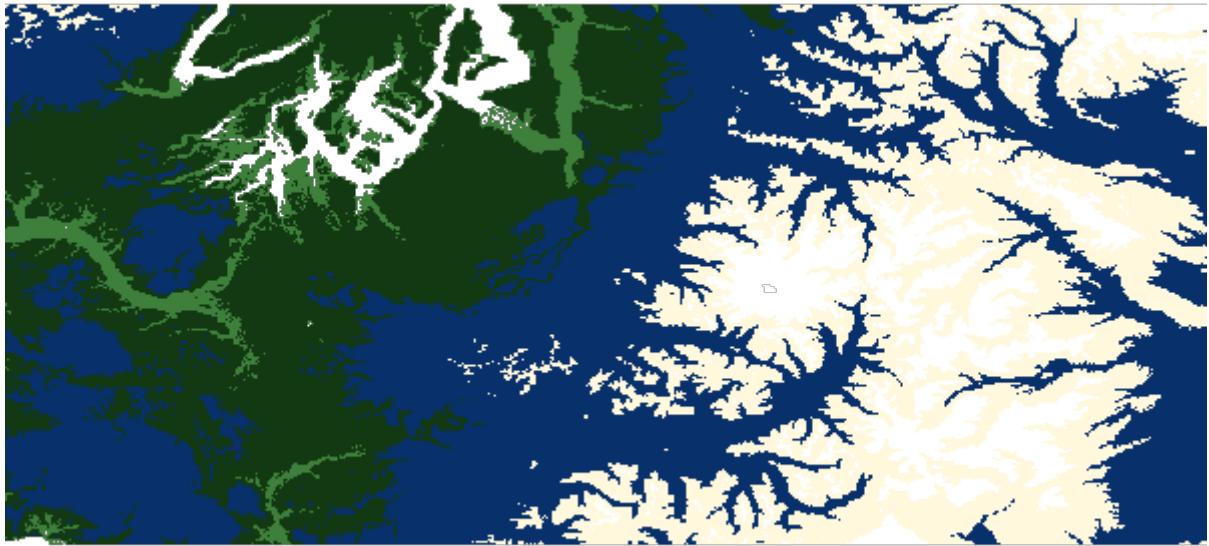

```
geo-shell> raster style set --name pcReclass --style examples/pcReclass.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/pcReclass.sld set on pcReclass
```

```
geo-shell> map open --name map  
Map map opened!
```

```
geo-shell> map add raster --name map --raster pcReclass  
Added pcReclass layer to map map
```

```
geo-shell> map draw --name map --file examples/raster_reclassify.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster_reclassify.png!
```

```
geo-shell> map close --name map  
Map map closed!
```

## Reproject

Project a Raster.

```
geo-shell> raster reproject --name earthCropped --output-format earth3857 --output-name earth3857 --projection "EPSG:3857"
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		
projection	The projection	true		

```
geo-shell> format open --name earth --input src/test/resources/earth.tif  
Format earth opened!
```

```
geo-shell> raster open --format earth --raster earth --name earth  
Opened Format earth Raster earth as earth
```

```
geo-shell> format open --name earthCropped --input examples/earthCropped.tif  
Format earthCropped opened!
```

```
geo-shell> raster crop --name earth --output-format earthCropped --output-name earthCropped  
--geometry "-180.0,-85.06,180.0,85.06"
```

Raster earth cropped to earthCropped!

```
geo-shell> format open --name earth3857 --input examples/earth3857.tif  
Format earth3857 opened!
```

```
geo-shell> raster reproject --name earthCropped --output-format earth3857 --output-name  
earth3857 --projection "EPSG:3857"
```

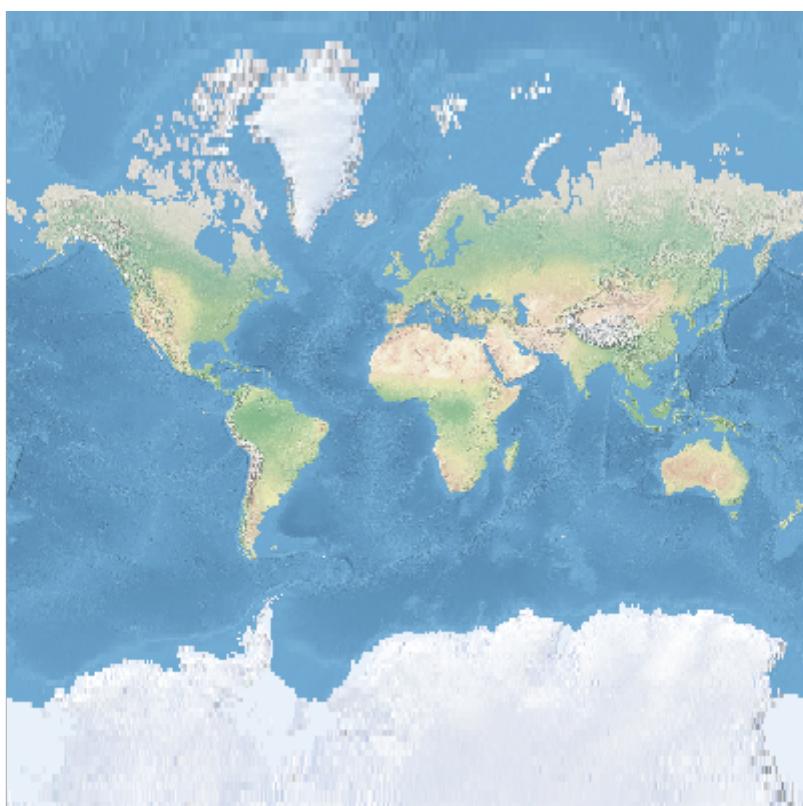

Raster earthCropped reprojected to earth3857 as EPSG:3857!

```
geo-shell> map open --name map  
Map map opened!
```

```
geo-shell> map add raster --name map --raster earth3857  
Added earth3857 layer to map map
```

```
geo-shell> map draw --name map --file examples/raster_reproject.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster_reproject.png!
```

```
geo-shell> map close --name map  
Map map closed!
```

## Scale

Scale a Raster.

```
geo-shell> raster scale --name pc --output-format pcScaled --output-name pcScaled --x 0.5 --y 0.5
```

Name	Description	Mandatory	Specified Default	Unspecified Default

name	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		
x	The scale factor along the x axis	true		
y	The scale factor along the y axis	true		
x-trans	The x translation	false	0	0
y-trans	The y translation	false	0	0
interpolation	The interpolation method (bicubic, bicubic2, bilinear, nearest)	false	nearest	nearest

geo-shell> **format open** --name pc --input src/test/resources/pc.tif  
Format pc opened!

geo-shell> **raster open** --format pc --raster pc --name pc  
Opened Format pc Raster pc as pc

Map map opened!

geo-shell> **map add raster** --name map --raster pcScaled  
Added pcScaled layer to map map

geo-shell> **map draw** --name map --file examples/raster\_scale.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster\_scale.png!

geo-shell> **map close** --name map  
Map map closed!

## Shaded Relief

Create a shaded relief raster

```
geo-shell> raster shadedrelief --name pc --output-format pcShaded --output-name pcShaded --scale 1.0 --altitude 25 --azimuth 260
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		
scale	The scale	true		
altitude	The altitude	true		
azimuth	The azimuth	true		
resx	The x resolution	false	0.5	0.5
resy	The y resolution	false	0.5	0.5
zetafactory	The zeta factory	false	1.0	1.0
algorithm	The x resolution	false	DEFAULT	DEFAULT

```
geo-shell> format open --name pc --input src/test/resources/pc.tif  
Format pc opened!
```

```
geo-shell> raster open --format pc --raster pc --name pc
```

```
Opened Format pc Raster pc as pc
```

```
geo-shell> format open --name pcShaded --input examples/pcShaded.tif
```

```
Format pcShaded opened!
```

```
geo-shell> raster shadedrelief --name pc --output-format pcShaded --output-name pcShaded --scale
```

```
1.0 --altitude 25 --azimuth 260
```

```
Create shaded relief pcShaded from pc!
```

```
geo-shell> map open --name map
```

```
Map map opened!
```

```
geo-shell> map add raster --name map --raster pcShaded
```

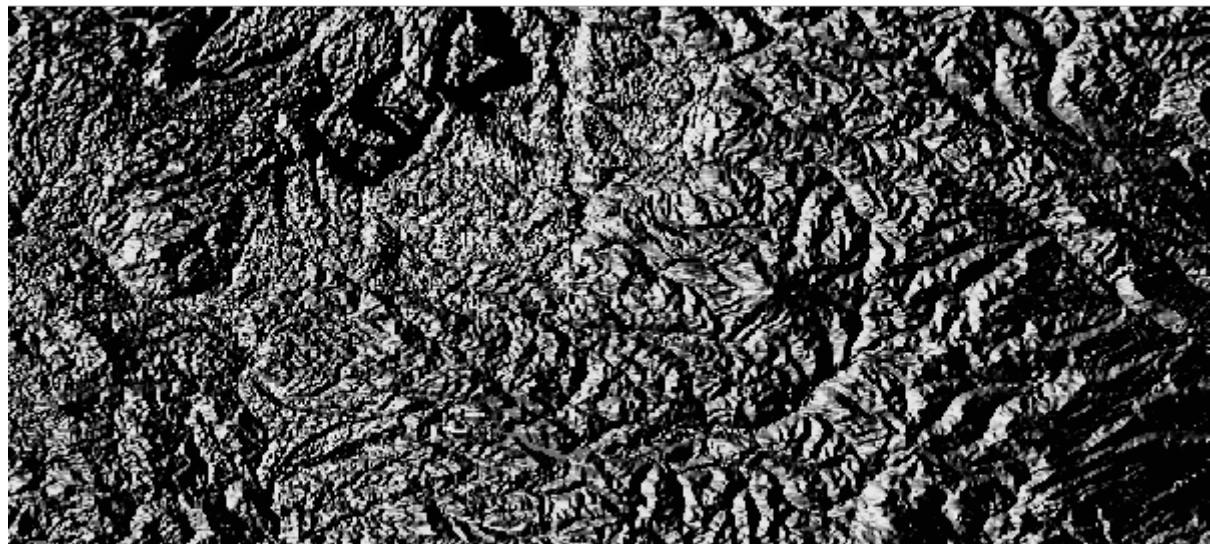

```
Added pcShaded layer to map map
```

```
geo-shell> map draw --name map --file examples/raster_shadedrelief.png
```

```
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster_shadedrelief.png!
```

```
geo-shell> map close --name map
```

```
Map map closed!
```

## Stylize

Create a new Raster by baking the style into an existing Raster

```
geo-shell> raster stylize --name pc --output-format pcStyled --output-name pcStyled
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
output-format	The output Format Workspace	true		
output-name	The output Raster name	false		

geo-shell> **format open** --name pc --input src/test/resources/pc.tif  
Format pc opened!

geo-shell> **raster open** --format pc --raster pc --name pc  
Opened Format pc Raster pc as pc

geo-shell> **style raster colormap** --raster pc --values  
"25=#9fd182,470=#3e7f3c,920=#133912,1370=#08306b,1820=#fffff5" --file examples/pc.sld  
Colormap Raster Style for pc written to /home/runner/work/geo-shell/geo-shell/examples/pc.sld!

geo-shell> **raster style set** --name pc --style examples/pc.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/pc.sld set on pc

geo-shell> **format open** --name pcStyled --input examples/pcStyled.tif  
Format pcStyled opened!

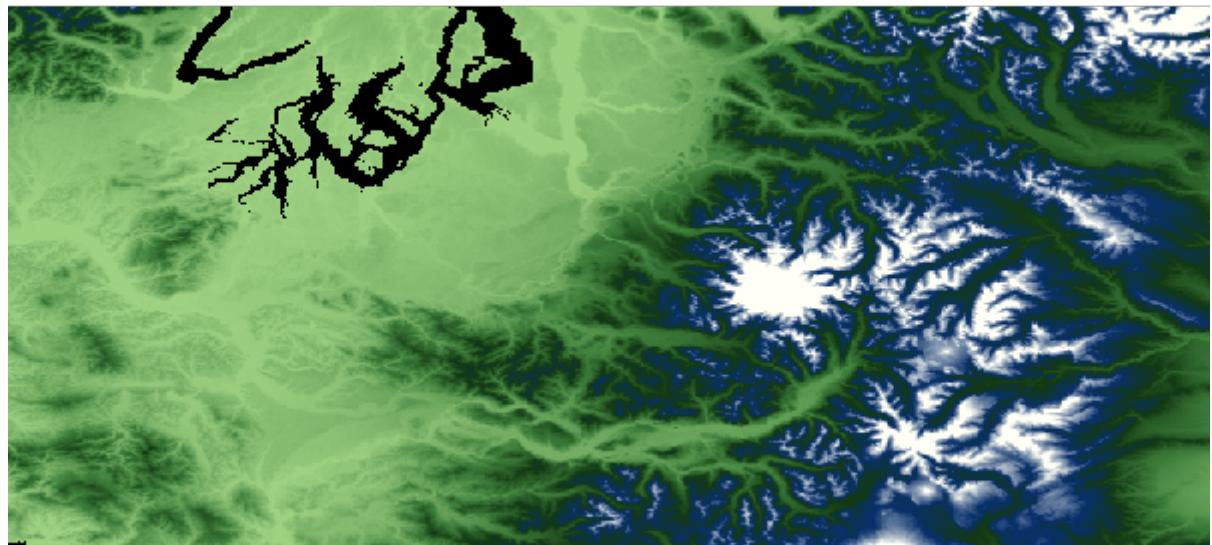

geo-shell> **raster stylize** --name pc --output-format pcStyled --output-name pcStyled  
Stylized pc to create pcStyled!

geo-shell> **map open** --name map  
Map map opened!

geo-shell> **map add raster** --name map --raster pcStyled  
Added pcStyled layer to map map

geo-shell> **map draw** --name map --file examples/raster\_stylize.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster\_stylize.png!

geo-shell> **map close** --name map  
Map map closed!

## Polygon

Convert a raster in a polygon

```
geo-shell> raster polygon --name high --output-workspace layers --output-name grid
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The Raster name	true		
output-workspace	The output Layer Workspace	true		
output-name	The output Layer name	true		
band	The band	false	0	0
inside-edges	Whether to include inside edges	false	true	true
roi	The region of interest	false		
nodata	The NODATA value	false	0	0

ranges	The comma delimited reclassification ranges (min,minIncluded, max,maxIncluded)	false		
--------	--	-------	--	--

geo-shell> **format open** --name high --input src/test/resources/high.tif  
Format high opened!

geo-shell> **raster open** --format high --raster high --name high  
Opened Format high Raster high as high

geo-shell> **workspace open** --name layers --params memory  
Workspace layers opened!

geo-shell> **raster polygon** --name high --output-workspace layers --output-name grid  
Done converting Raster high to a Polygon Layer grid!

geo-shell> **style raster palette colormap** --min 1 --max 50 --palette MutedTerrain --number 20 --file examples/high.sld  
Colormap Palette Raster Style written to /home/runner/work/geo-shell/geo-shell/examples/high.sld!

geo-shell> **raster style set** --name high --style examples/high.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/high.sld set on high

geo-shell> **style create** --params "stroke=black stroke-width=2 label=value label-size=12" --file examples/grid.sld  
Style stroke=black stroke-width=2 label=value label-size=12 written to /home/runner/work/geo-shell/geo-shell/examples/grid.sld!

geo-shell> **layer style set** --name grid --style examples/grid.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/grid.sld set on grid

geo-shell> **map open** --name map  
Map map opened!

geo-shell> **map add raster** --name map --raster high  
Added high layer to map map

geo-shell> **map add layer** --name map --layer grid  
Added grid layer to map map

geo-shell> **map draw** --name map --file examples/raster\_polygon.png --bounds "-180,-90,180,90,EPSC:4326"  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/raster\_polygon.png!

geo-shell> **map close** --name map  
Map map closed!

17.0	18.0	19.0	20.0
13.0	14.0	15.0	16.0
9.0	10.0	11.0	12.0
5.0	6.0	7.0	8.0

# Tile

## Open

Open a Tile Layer.

```
geo-shell> tile open --name countries --params src/test/resources/countries.mbtiles
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The tile name	true		
params	The connection parameters	true		

```
geo-shell> tile open --name countries --params src/test/resources/countries.mbtiles
Tile Layer countries opened!
```

```
geo-shell> tile close --name countries
```

Tile Layer countries closed!

## Close

Close a Tile Layer.

```
geo-shell> tile close --name countries
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The tile name	true		

```
geo-shell> tile open --name countries --params src/test/resources/countries.mbtiles
Tile Layer countries opened!
```

```
geo-shell> tile close --name countries
Tile Layer countries closed!
```

## List

List open Tile Layers.

```
geo-shell> tile list
```

No parameters

```
geo-shell> tile open --name countries --params src/test/resources/countries.mbtiles
Tile Layer countries opened!
```

```
geo-shell> tile list
countries = MBTiles
```

```
geo-shell> tile close --name countries
Tile Layer countries closed!
```

## Info

Get information about a Tile Layer.

```
geo-shell> tile info --name countries
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The tile name	true		

```
geo-shell> tile open --name countries --params src/test/resources/countries.mbtiles
Tile Layer countries opened!
```

```
geo-shell> tile info --name countries
countries

```

```

geo-shell> tile close --name countries
Tile Layer countries closed!

```

## Delete

Delete tiles from a Tile Layer.

```

geo-shell> tile delete --name tiles --z 3

```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The tile name	true		
tile	The tile z/x/y	false		
bounds	The bounds	false		
width	The width	false	400	400
height	The height	false	400	400
z	The zoom level	false	0	-1
minx	The min x or column	false		-1
miny	The min y or row	false		-1
maxx	The max x or column	false		-1
maxy	The max y or row	false		-1

```
geo-shell> tile open --name tiles --params target/tiles.mbtiles
```

Tile Layer tiles opened!

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Opened Workspace naturalearth Layer countries as countries

```
geo-shell> layer style set --name countries --style examples/countries.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
```

Opened Workspace naturalearth Layer ocean as ocean

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

```
geo-shell> map open --name world
```

Map world opened!

```
geo-shell> map add layer --name world --layer ocean
```

Added ocean layer to map world

```
geo-shell> map add layer --name world --layer countries
```

Added countries layer to map world

```
geo-shell> tile generate --name tiles --map world --start 0 --end 3
```

Tiles generated!

```
geo-shell> tile delete --name tiles --z 3
```

Deleting tiles at z level 3

```
geo-shell> map close --name world
```

Map world closed!

## Generate

Generate tiles for a Tile Layer.

```
geo-shell> tile generate --name tiles --map world --start 0 --end 3
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The tile name	true		
map	The map name	true		
start	The map name	true		
end	The map name	true		

bounds	The map name	false		
metatile	The metatile width,height	false		
missingOnly	The map name	false	false	false
verbose	The map name	false	false	false

geo-shell> **tile open** --name tiles --params target/tiles.mbtiles

Tile Layer tiles opened!

geo-shell> **workspace open** --name naturalearth --params examples/naturalearth.gpkg

Workspace naturalearth opened!

geo-shell> **layer open** --workspace naturalearth --layer countries --name countries

Opened Workspace naturalearth Layer countries as countries

geo-shell> **layer style set** --name countries --style examples/countries.sld

Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries

geo-shell> **layer open** --workspace naturalearth --layer ocean --name ocean

Opened Workspace naturalearth Layer ocean as ocean

geo-shell> **layer style set** --name ocean --style examples/ocean.sld

Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

geo-shell> **map open** --name world

Map world opened!

geo-shell> **map add layer** --name world --layer ocean

Added ocean layer to map world

geo-shell> **map add layer** --name world --layer countries

Added countries layer to map world

geo-shell> **tile generate** --name tiles --map world --start 0 --end 3

Tiles generated!

geo-shell> **format open** --name world\_level2 --input examples/tile\_generate.png

Format world\_level2 opened!

geo-shell> **tile stitch raster** --name tiles --format world\_level2 --raster world\_level2 --z 2

Done stitching Raster world\_level2 from tiles!

geo-shell> **map close** --name world

Map world closed!

## Stitch Raster

Create a Raster from a Tile Layer.

```
geo-shell> tile stitch raster --name countries --format states --raster states --bounds -18217695.5734,1222992.4526,-4207094.0368,7924991.0926
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The tile name	true		
format	The raster format name	true		
raster	The raster name	true		

bounds	The bounds	false		
width	The raster width	false	400	400
height	The raster height	false	400	400
z	The zoom level	false	0	-1
minx	The min x or column	false		-1
miny	The min y or row	false		-1
maxx	The max x or column	false		-1
maxy	The max y or row	false		-1

Create a Raster from a Tile Layer with a geographic bounds.

```
geo-shell> tile open --name countries --params src/test/resources/countries.mbtiles
Tile Layer countries opened!
```

```
geo-shell> format open --name states --input examples/tile_stitch_bounds.png
Format states opened!
```

```
geo-shell> tile stitch raster --name countries --format states --raster states --bounds
-18217695.5734,1222992.4526,-4207094.0368,7924991.0926
Done stitching Raster states from countries!
```

## Tiles

List tiles within a given bounds.

```
geo-shell> tile tiles --name countries --z 8 --bounds -13787405.4140,5872198.2610,
-13349574.1159,6081635.7185
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The tile name	true		
bounds	The bounds	true		
z	The zoom level	true		

```
geo-shell> tile open --name countries --params src/test/resources/countries.mbtiles
Tile Layer countries opened!
```

```
geo-shell> tile tiles --name countries --z 8 --bounds -13787405.4140,5872198.2610,
-13349574.1159,6081635.7185
8/39/165
8/40/165
8/41/165
8/42/165
8/39/166
8/40/166
8/41/166
8/42/166
```

```
geo-shell> tile close --name countries
Tile Layer countries closed!
```

## Vector Grid

Create a Vector Grid Layer from the pyramid of a Tile Layer.

```
geo-shell> tile vector grid --name countries --workspace layers --layer level3 --z 3
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The tile name	true		
workspace	The workspace name	true		
layer	The layer name	true		
bounds	The bounds	false		
width	The raster width	false	400	400
height	The raster height	false	400	400
z	The zoom level	false	0	-1
minx	The min x or column	false		-1
miny	The min y or row	false		-1

maxx	The max x or column	false		-1
maxy	The max y or row	false		-1

geo-shell> **tile open** --name countries --params src/test/resources/countries.mbtiles  
Tile Layer countries opened!

geo-shell> **workspace open** --name layers --params memory  
Workspace layers opened!

geo-shell> **tile vector grid** --name countries --workspace layers --layer level3 --z 3  
Done generating the vector grid level3 from countries!

geo-shell> **style vector default** --layer level3 --color #ffffff --opacity 0.25 --file examples/level3.sld  
Default Vector Style for level3 written to /home/runner/work/geo-shell/geo-shell/examples/level3.sld!

geo-shell> **layer style set** --name level3 --style examples/level3.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/level3.sld set on level3

geo-shell> **workspace open** --name naturalearth --params examples/naturalearth.gpkg  
Workspace naturalearth opened!

geo-shell> **layer open** --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries

geo-shell> **layer style set** --name countries --style examples/countries.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries

geo-shell> **layer open** --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean

geo-shell> **layer style set** --name ocean --style examples/ocean.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean

geo-shell> **map open** --name vectorGridMap  
Map vectorGridMap opened!

geo-shell> **map add layer** --name vectorGridMap --layer ocean  
Added ocean layer to map vectorGridMap

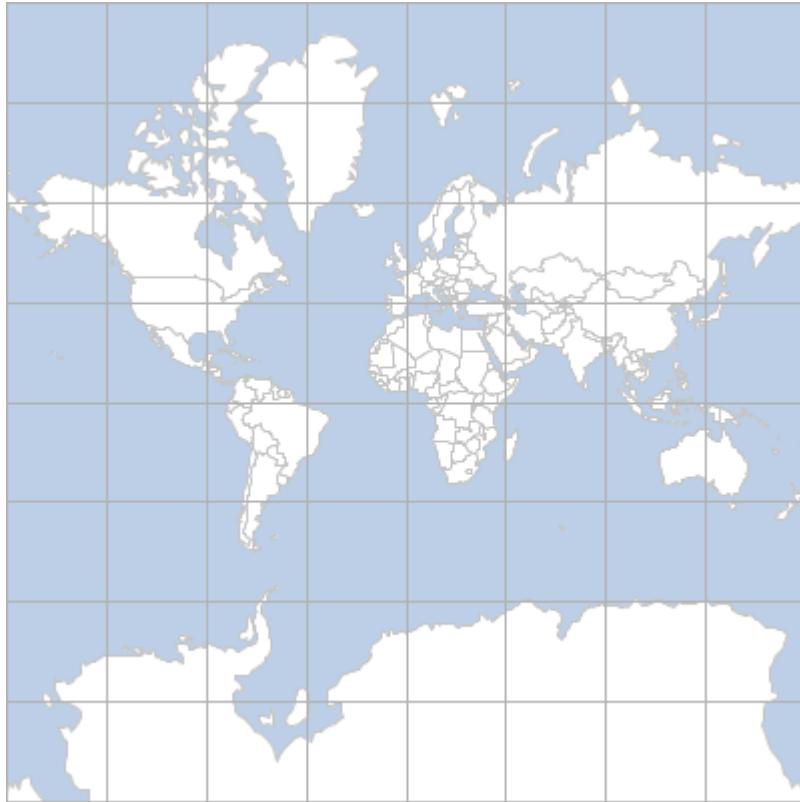

geo-shell> **map add layer** --name vectorGridMap --layer countries  
Added countries layer to map vectorGridMap

geo-shell> **map add layer** --name vectorGridMap --layer level3  
Added level3 layer to map vectorGridMap

geo-shell> **map draw** --name vectorGridMap --file examples/tile\_vector\_grid.png --projection EPSG:3857 --width 400 --height 400 --bounds -20026376.39,-20048966.10,20026376.39,20048966.10  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/tile\_vector\_grid.png!

```
geo-shell> map close --name vectorGridMap
```

```
Map vectorGridMap closed!
```

# Style

## Create

Create a simple style.

```
geo-shell> style create --params "stroke=black stroke-width=0.25 fill=wheat" --file examples/style_create.sld
```

Name	Description	Mandatory	Specified Default	Unspecified Default
params	The style parameters	true		
file	The output file	true		

```
geo-shell> style create --params "stroke=black stroke-width=0.25 fill=wheat" --file examples/style_create.sld
```

```
Style stroke=black stroke-width=0.25 fill=wheat written to /home/runner/work/geo-shell/geo-shell/examples/style_create.sld!
```

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg
```

```
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Opened Workspace naturalearth Layer countries as countries

```
geo-shell> layer style set --name countries --style examples/style_create.sld
Style /home/runner/work/geo-shell/geo-shell/examples/style_create.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map open --name map
Map map opened!
```

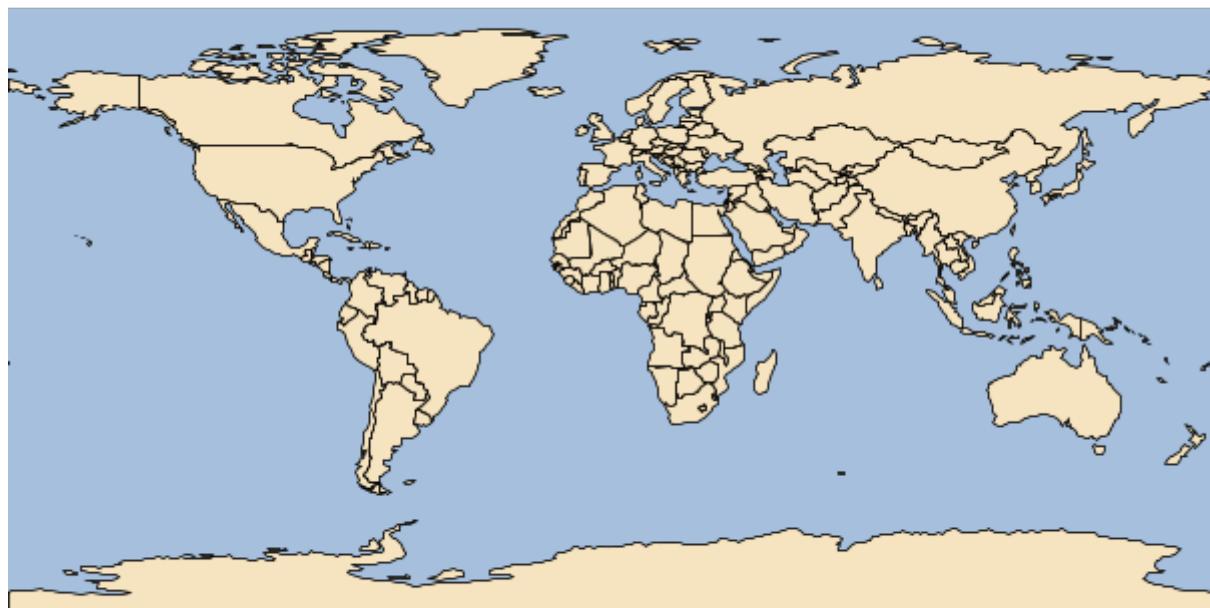

```
geo-shell> map add layer --name map --layer ocean
Added ocean layer to map map
```

```
geo-shell> map add layer --name map --layer countries
Added countries layer to map map
```

```
geo-shell> map draw --name map --file examples/style_create.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/style_create.png!
```

```
geo-shell> map close --name map
Map map closed!
```

```

# Vector Default

Create a default vector style.

```
geo-shell> style vector default --layer countries --color #F5F5DC --file examples/countries_default.sld
```

Name	Description	Mandatory	Specified Default	Unspecified Default
layer	The Layer	true		
color	The color	false	#f2f2f2	#f2f2f2
opacity	The opacity	false	1.0	1.0
file	The output file	true		

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg  
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> style vector default --layer countries --color #F5F5DC --file examples/countries_default.sld  
Default Vector Style for countries written to /home/runner/work/geo-shell/geo-shell/examples/countries_default.sld!
```

```
geo-shell> layer style set --name countries --style examples/countries_default.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/countries_default.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> style vector default --layer ocean --color DeepSkyBlue --file examples/ocean_default.sld  
Default Vector Style for ocean written to /home/runner/work/geo-shell/geo-shell/examples/ocean_default.sld!
```

```
geo-shell> layer style set --name ocean --style examples/ocean_default.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/ocean_default.sld set on ocean
```

```
geo-shell> map open --name map  
Map map opened!
```

```
geo-shell> map add layer --name map --layer ocean  
Added ocean layer to map map
```

```
geo-shell> map add layer --name map --layer countries  
Added countries layer to map map
```

```
geo-shell> map draw --name map --file examples/style_vector_default.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/style_vector_default.png!
```

```
geo-shell> map close --name map
```

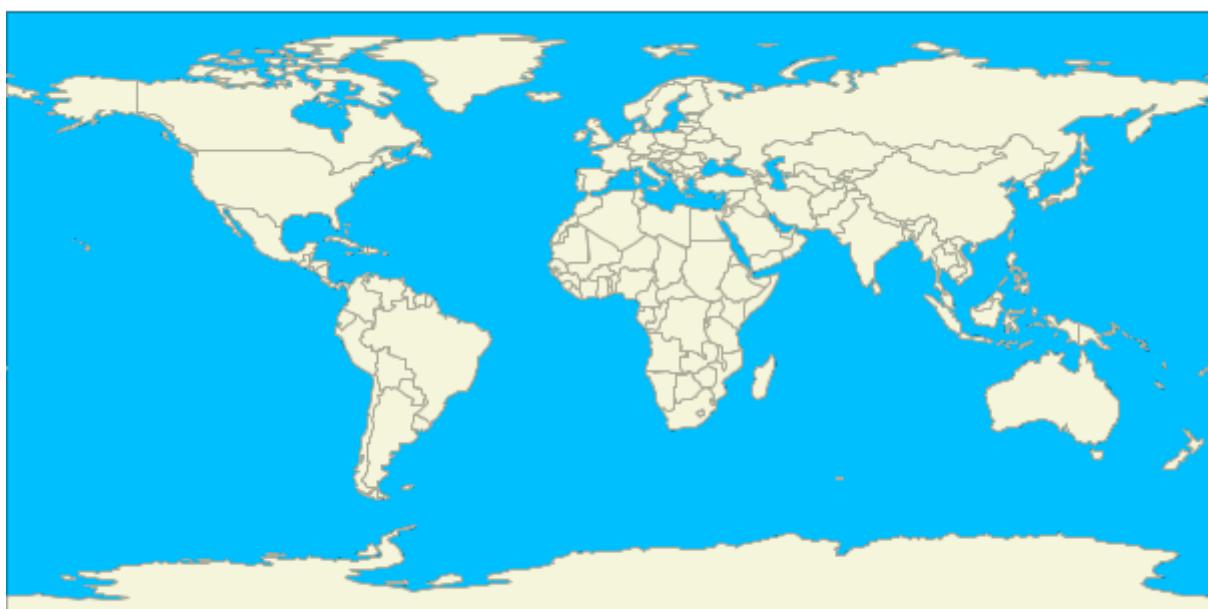

```
Map map closed!
```

Country Style

# Vector Gradient

Create a gradient vector style.

```
geo-shell> style vector gradient --layer countries --field PEOPLE --colors greens --number 8  
--method quantile --file examples/style_vector_gradient.sld
```

Name	Description	Mandatory	Specified Default	Unspecified Default
layer	The Layer	true		
field	The field	true		
number	The number of categories	true		
colors	The colors	true		
method	The classification method (Quantile or EqualInterval)	false	Quantile	Quantile
elsemode	The else mode (ignore, min, max)	false	ignore	ignore
file	The output file	true		

```
geo-shell> workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg  
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> style vector gradient --layer countries --field PEOPLE --colors greens --number 8  
--method quantile --file examples/style_vector_gradient.sld  
Gradient Vector Style for countries's PEOPLE Field written to /home/runner/work/geo-shell/geo-  
shell/examples/style_vector_gradient.sld!
```

```
geo-shell> layer style set --name countries --style examples/style_vector_gradient.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/style_vector_gradient.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean
```

```
geo-shell> layer style set --name ocean --style examples/ocean.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map open --name map  
Map map opened!
```

```
geo-shell> map add layer --name map --layer ocean  
Added ocean layer to map map
```

```
geo-shell> map add layer --name map --layer countries
```

```
Added countries layer to map map
```

## Raster Palette Color Map

Create a color map raster style from a color palette.

```
geo-shell> style raster palette colormap --min 1 --max 50 --palette MutedTerrain --number 20 --file examples/style_raster_palette_colormap.sld
```

Name	Description	Mandatory	Specified Default	Unspecified Default
min	The min value	true		
max	The max value	true		
palette	The color palette name (from Color Brewer)	true		
number	The number of categories	true		
type	The type of interpolation	false	ramp	ramp
extended	Whether to use extended colors	false	false	false
opacity	The opacity	false	1.0	1.0
file	The output file	true		

```
geo-shell> format open --name high --input src/test/resources/high.tif  
Format high opened!
```

```
geo-shell> raster open --format high --raster high --name high  
Opened Format high Raster high as high
```

```
geo-shell> style raster palette colormap --min 1 --max 50 --palette MutedTerrain --number 20 --file  
examples/style_raster_palette_colormap.sld  
Colormap    Palette    Raster    Style    written    to    /home/runner/work/geo-shell/geo-  
shell/examples/style_raster_palette_colormap.sld!
```

```
geo-shell> raster style set --name high --style examples/style_raster_palette_colormap.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/style_raster_palette_colormap.sld set on high
```

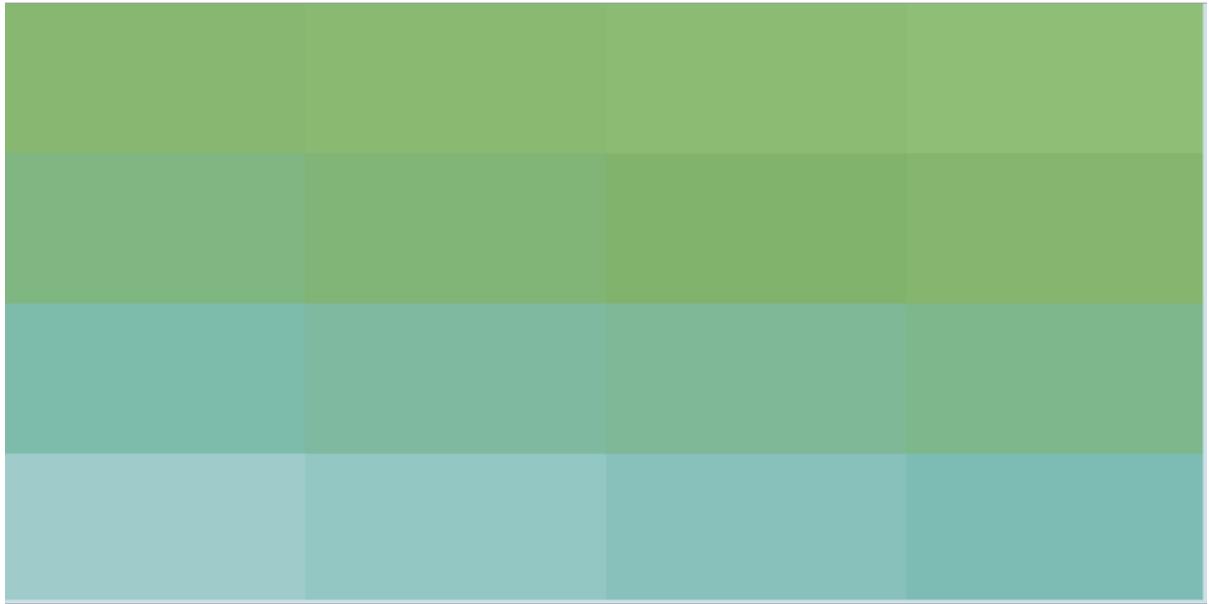

```
geo-shell> map open --name map  
Map map opened!
```

```
geo-shell> map add raster --name map --raster high  
Added high layer to map map
```

```

# Map

## Open

Open a new Map.

```
geo-shell> map open --name earth
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		

```
geo-shell> map open --name earth
```

Map earth opened!

```
geo-shell> map close --name earth
```

Map earth closed!

## Close

Close a Map.

```
geo-shell> map close --name earth
```

Name	Description	Mandatory	Specified Default	Unspecified Default

name	The map name	true		
------	--------------	------	--	--

geo-shell> **map open** --name earth  
Map earth opened!

geo-shell> **map close** --name earth  
Map earth closed!

## List

List open Maps.

geo-shell> **map list**

No parameters

geo-shell> **map open** --name earth  
Map earth opened!

geo-shell> **map open** --name us  
Map us opened!

geo-shell> **map list**

earth

us

geo-shell> **map close** --name earth  
Map earth closed!

geo-shell> **map close** --name us  
Map us closed!

## Add Layer

Add a Vector Layer.

geo-shell> **map add layer** --name world --layer countries

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		
layer	The layer	true		
mapLayerName	The map layer name	false		

geo-shell> **map open** --name world  
Map world opened!

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg  
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean  
Opened Workspace naturalearth Layer ocean as ocean
```

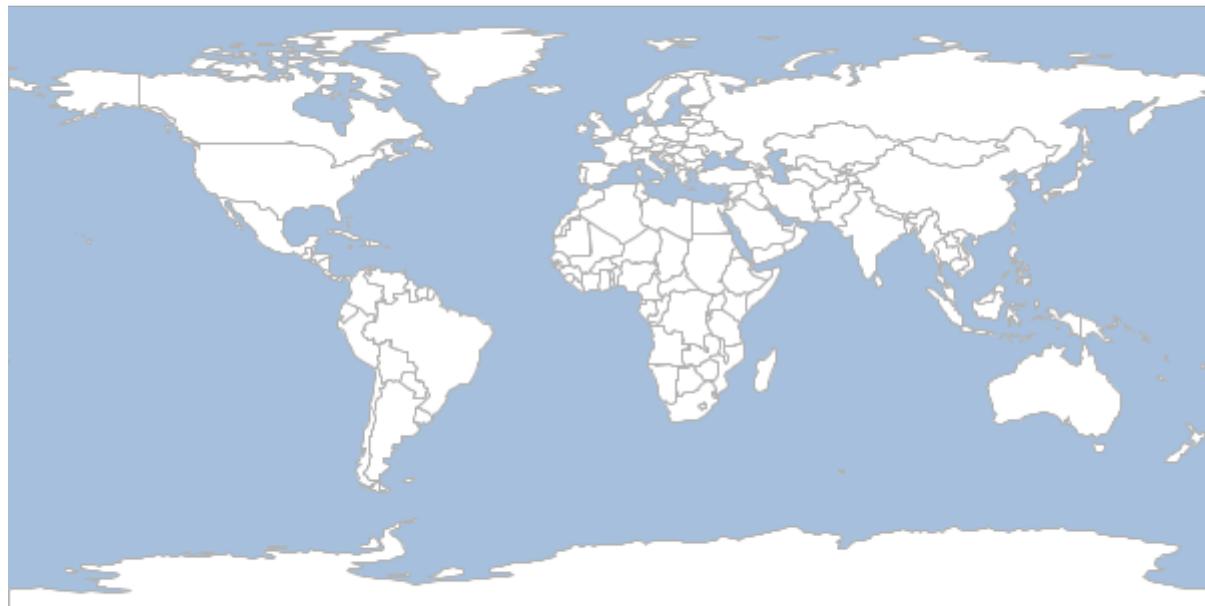

```
geo-shell> layer style set --name ocean --style examples/ocean.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map add layer --name world --layer ocean  
Added ocean layer to map world
```

```
geo-shell> map add layer --name world --layer countries  
Added countries layer to map world
```

```
geo-shell> map draw --name world --file examples/map_add_layer.png  
Done drawing /home/runner/work/geo-shell/geo-shell/examples/map_add_layer.png!
```

```
geo-shell> map close --name world  
Map world closed!
```

# Add Raster

Add a Raster Layer.

```
geo-shell> map add raster --name world --raster earth
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		
raster	The raster	true		
mapLayerName	The map layer name	false		

```
geo-shell> map open --name world
```

Map world opened!

```
geo-shell> format open --name earth --input src/test/resources/earth.tif
```

Format earth opened!

```
geo-shell> raster open --format earth --raster earth --name earth
```

Opened Format earth Raster earth as earth

```
geo-shell> map add raster --name world --raster earth
```

Added earth layer to map world

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Opened Workspace naturalearth Layer countries as countries

```
geo-shell> style create --params "stroke=black stroke-width=0.1" --file examples/outline.sld
```

Style stroke=black stroke-width=0.1 written to /home/runner/work/geo-shell/geo-shell/examples/outline.sld!

```
geo-shell> layer style set --name countries --style examples/outline.sld
```

Style /home/runner/work/geo-shell/geo-shell/examples/outline.sld set on countries

```
geo-shell> map add layer --name world --layer countries
```

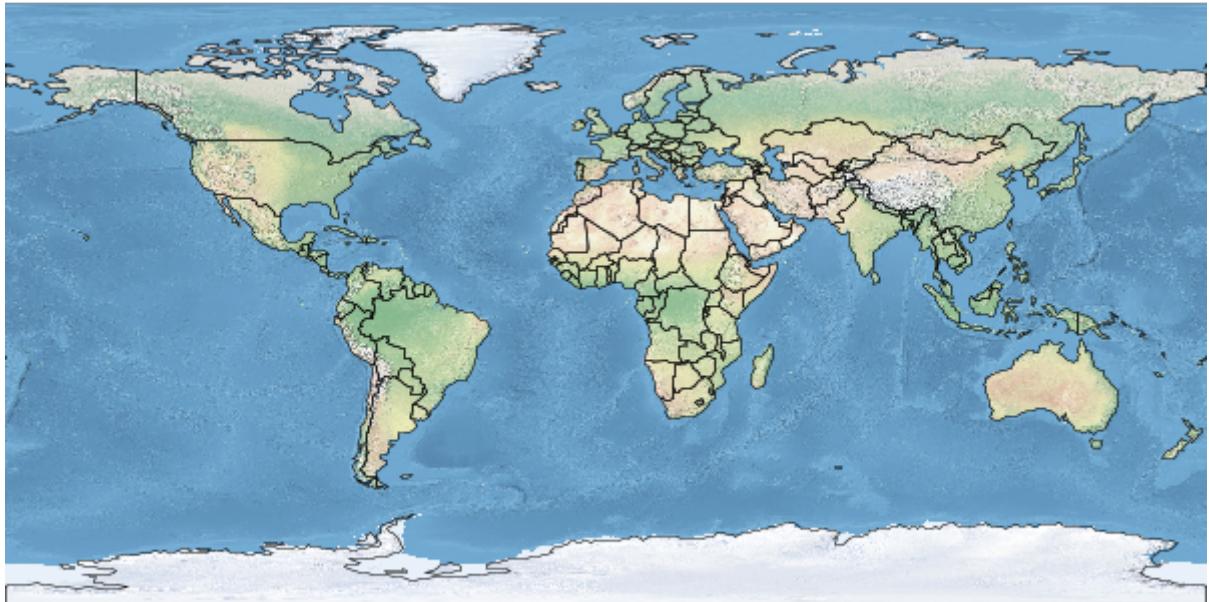

Added countries layer to map world

```
geo-shell> map draw --name world --file examples/map_add_raster.png
```

Done drawing /home/runner/work/geo-shell/geo-shell/examples/map\_add\_raster.png!

```
geo-shell> map close --name world
```

Map world closed!

## Add Tile Layer

Add a Tile Layer.

```
geo-shell> map add tile --name world --tile tiles
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		
tile	The tile	true		
mapLayerName	The map layer name	false		

```
geo-shell> map open --name world
```

Map world opened!

```
geo-shell> tile open --name tiles --params src/test/resources/countries.mbtiles
```

Tile Layer tiles opened!

```
geo-shell> map add tile --name world --tile tiles
```

Added tiles layer to map world

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer open --workspace naturalearth --layer places --name places
```

Opened Workspace naturalearth Layer places as places

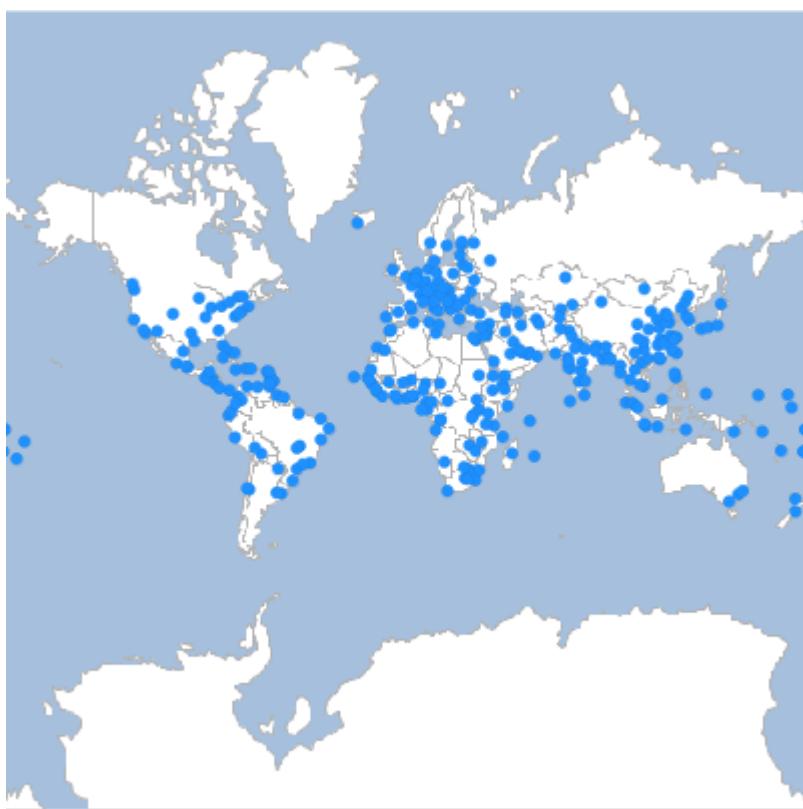

```
geo-shell> style vector default --layer places --color #1E90FF --file examples/places.sld
Default Vector Style for places written to /home/runner/work/geo-shell/geo-shell/examples/places.sld!
```

```
geo-shell> layer style set --name places --style examples/places.sld
Style /home/runner/work/geo-shell/geo-shell/examples/places.sld set on places
```

```
geo-shell> map add layer --name world --layer places
Added places layer to map world
```

```
geo-shell> map draw --name world --width 400 --height 400 --file examples/map_add_tile.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/map_add_tile.png!
```

```
geo-shell> map close --name world
Map world closed!
```

## Remove Layer

Remove a Layer.

```
geo-shell> map remove layer --name world --layer countries
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		
layer	The layer name	true		

```
geo-shell> map open --name world
```

Map world opened!

```
geo-shell> format open --name earth --input src/test/resources/earth.tif
Format earth opened!
```

```
geo-shell> raster open --format earth --raster earth --name earth
Opened Format earth Raster earth as earth
```

```
geo-shell> map add raster --name world --raster earth
Added earth layer to map world
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> style create --params "stroke=black stroke-width=0.1" --file examples/outline.sld
Style    stroke=black    stroke-width=0.1    written    to    /home/runner/work/geo-shell/geo-
shell/examples/outline.sld!
```

```
geo-shell> layer style set --name countries --style examples/outline.sld
Style /home/runner/work/geo-shell/geo-shell/examples/outline.sld set on countries
```

```
geo-shell> map add layer --name world --layer countries
Added countries layer to map world
```

```
geo-shell> map layers --name world
earth
countries
```

```
geo-shell> map remove layer --name world --layer countries
Removed countries layer from map world
```

```
geo-shell> map layers --name world
earth
```

```
geo-shell> map close --name world
Map world closed!
```

## Reorder

Reorder a Layer in the Map.

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		
layer	The layer name	true		

order	The order parameters	true		
-------	----------------------	------	--	--

geo-shell> **map open** --name world

Map world opened!

geo-shell> **workspace open** --name naturalearth --params examples/naturalearth.gpkg

Workspace naturalearth opened!

geo-shell> **layer open** --workspace naturalearth --layer countries --name countries

Opened Workspace naturalearth Layer countries as countries

geo-shell> **style create** --params "stroke=black stroke-width=0.1" --file examples/outline.sld

Style stroke=black stroke-width=0.1 written to /home/runner/work/geo-shell/geo-shell/examples/outline.sld!

geo-shell> **layer style set** --name countries --style examples/outline.sld

Style /home/runner/work/geo-shell/geo-shell/examples/outline.sld set on countries

geo-shell> **map add layer** --name world --layer countries

Added countries layer to map world

geo-shell> **format open** --name earth --input src/test/resources/earth.tif

Format earth opened!

geo-shell> **raster open** --format earth --raster earth --name earth

Opened Format earth Raster earth as earth

geo-shell> **map add raster** --name world --raster earth

Added earth layer to map world

geo-shell> **map layers** --name world

countries

earth

geo-shell> **map reorder** --name world --layer countries --order 1

Moved countries from 0 to 1

geo-shell> **map layers** --name world

earth

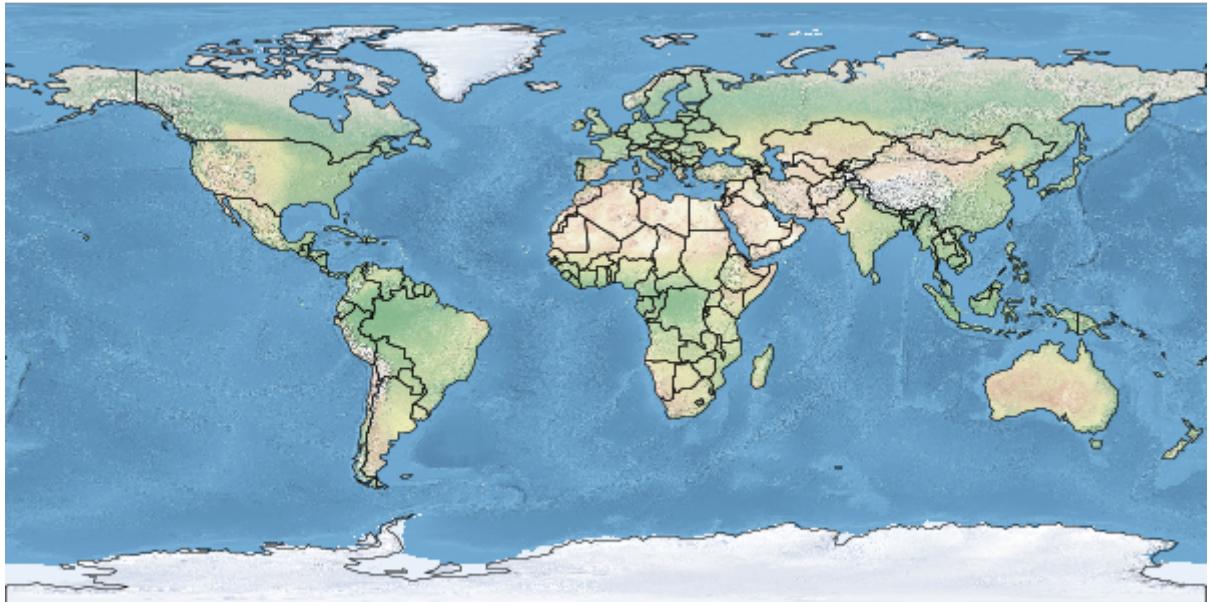

countries

geo-shell> **map draw** --name world --file examples/map\_reordered.png

Done drawing /home/runner/work/geo-shell/geo-shell/examples/map\_reordered.png!

geo-shell> **map close** --name world

Map world closed!

## Layers

List the Map's Layers.

```
geo-shell> map layers --name world
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		

```
geo-shell> map open --name world
```

Map world opened!

```
geo-shell> format open --name earth --input src/test/resources/earth.tif
```

Format earth opened!

```
geo-shell> raster open --format earth --raster earth --name earth
```

Opened Format earth Raster earth as earth

```
geo-shell> map add raster --name world --raster earth
```

Added earth layer to map world

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg
```

Workspace naturalearth opened!

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries
```

Opened Workspace naturalearth Layer countries as countries

```
geo-shell> style create --params "stroke=black stroke-width=0.1" --file examples/outline.sld
```

```
Style stroke=black stroke-width=0.1 written to /home/runner/work/geo-shell/geo-shell/examples/outline.sld!
```

```
geo-shell> layer style set --name countries --style examples/outline.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/outline.sld set on countries
```

```
geo-shell> map add layer --name world --layer countries  
Added countries layer to map world
```

```
geo-shell> map layers --name world  
earth  
countries
```

```
geo-shell> map close --name world  
Map world closed!
```

## Draw

Draw a map.

```
geo-shell> map draw --name world --file examples/map_draw.png
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		
bounds	The Bounds	false		
projection	The Projection	false		
width	The width	false	600	600
height	The height	false	400	400
type	The type	false	png	png
file	The file	false		
background-color	The background color	false		

```
geo-shell> map open --name world  
Map world opened!
```

```
geo-shell> workspace open --name naturalearth --params examples/naturalearth.gpkg  
Workspace naturalearth opened!
```

```
geo-shell> layer open --workspace naturalearth --layer countries --name countries  
Opened Workspace naturalearth Layer countries as countries
```

```
geo-shell> layer style set --name countries --style examples/countries.sld  
Style /home/runner/work/geo-shell/geo-shell/examples/countries.sld set on countries
```

```
geo-shell> layer open --workspace naturalearth --layer ocean --name ocean
```

Opened Workspace naturalearth Layer ocean as ocean

```
geo-shell> layer style set --name ocean --style examples/ocean.sld
Style /home/runner/work/geo-shell/geo-shell/examples/ocean.sld set on ocean
```

```
geo-shell> map add layer --name world --layer ocean
Added ocean layer to map world
```

```
geo-shell> map add layer --name world --layer countries
Added countries layer to map world
```

```
geo-shell> map draw --name world --file examples/map_draw.png
Done drawing /home/runner/work/geo-shell/geo-shell/examples/map_draw.png!
```

```
geo-shell> map close --name world
Map world closed!
```

## Display

Display a map in a GUI.

```
geo-shell> map display --name world
```

Name	Description	Mandatory	Specified Default	Unspecified Default
name	The map name	true		
bounds	The Bounds	false		
projection	The Projection	false		

width	The width	false	600	600
height	The height	false	400	400
background-color	The background color	false		

geo-shell> **map open** --name world

Map world opened!

geo-shell> **workspace open** --name naturalearth --params examples/naturalearth.gpkg

Workspace naturalearth opened!

geo-shell> **layer open** --workspace naturalearth --layer countries --name countries

Opened Workspace naturalearth Layer countries as countries

geo-shell> **layer style set** --name countries --style examples/countries.sld

Style /Users/jericks/Projects/geo-shell/examples/countries.sld set on countries

geo-shell> **layer open** --workspace naturalearth --layer ocean --name ocean

Opened Workspace naturalearth Layer ocean as ocean

geo-shell> **layer style set** --name ocean --style examples/ocean.sld

Style /Users/jericks/Projects/geo-shell/examples/ocean.sld set on ocean

geo-shell> **map add layer** --name world --layer ocean

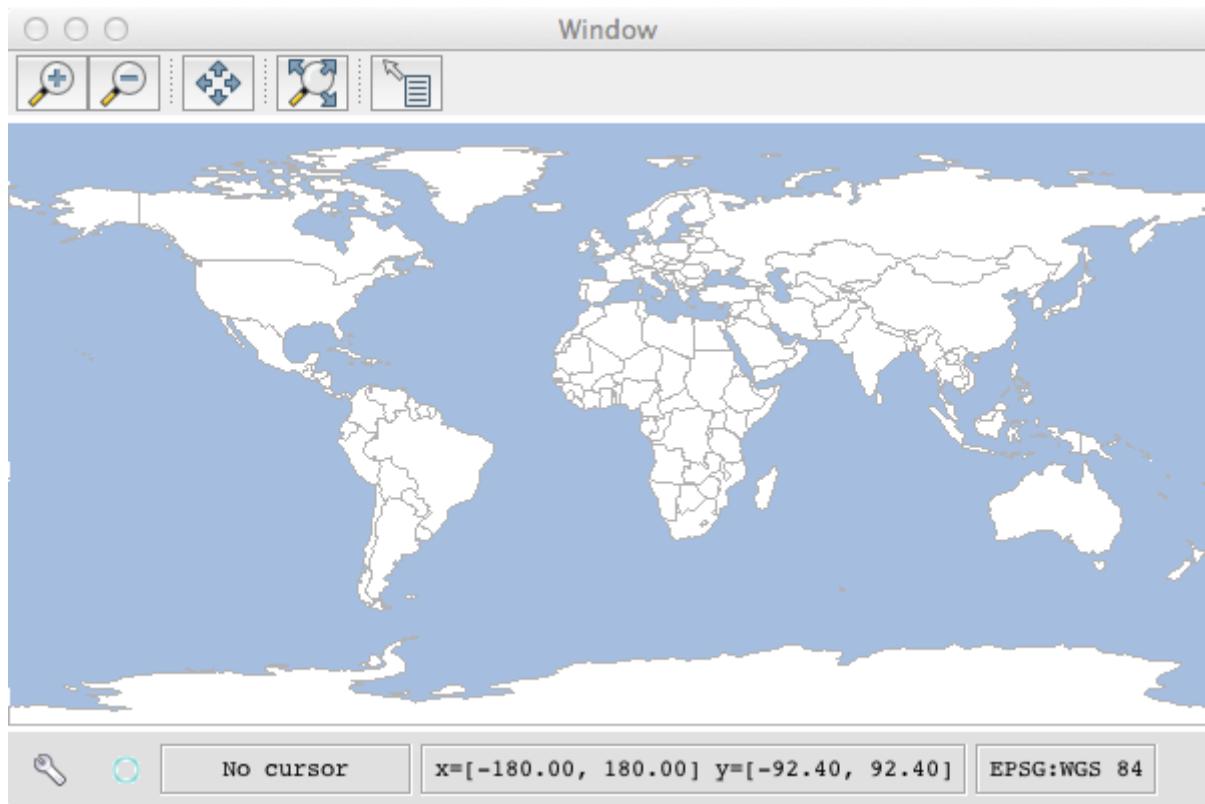

Added ocean layer to map world

geo-shell> **map add layer** --name world --layer countries

Added countries layer to map world

geo-shell> **map display** --name world

Displaying...

## Built in

### Exit / Quit

Exits the shell

geo-shell> **exit**

No parameters

### Help

List all commands usage

Name	Description	Mandatory	Specified Default	Unspecified Default
	Command name to provide help for	false		

View all commands

geo-shell> **help**

- \* ! - Allows execution of operating system (OS) commands
- \* // - Inline comment markers (start of line only)
- \* ; - Inline comment markers (start of line only)

- \* clear - Clears the console
- \* cls - Clears the console
- \* date - Displays the local date and time
- \* download - Download a URL to a file.
- \* exit - Exits the shell
- \* format close - Close a Raster Format.
- \* format list - List open Raster Formats.

Get help for a command

```
geo-shell> help layer open
```

Keyword: layer open

Description: Open a Layer.

Keyword: workspace

Help: The Workspace name

Mandatory: true

Default if specified: 'NULL'

Default if unspecified: 'NULL'

Keyword: layer

Help: The Layer name

Mandatory: true

Default if specified: 'NULL'

Default if unspecified: 'NULL'

Keyword: name

Help: The name

Mandatory: false

Default if specified: 'NULL'

Default if unspecified: 'NULL'

\* layer open - Open a Layer.

## Run OS Command

Allows execution of operating system (OS) commands

```
geo-shell> ! ls src/test/resources/mars
```

Name	Description	Mandatory	Specified Default	Unspecified Default
	The command to execute	false		

```
geo-shell> ! ls src/test/resources/mars
```

I1802ABC\_geo\_units\_RGBlut.txt

geo\_units\_oc\_dd.dbf

```
geo_units_oc_dd.prj  
geo_units_oc_dd.qix  
geo_units_oc_dd.sbn  
geo_units_oc_dd.sbx  
geo_units_oc_dd.shp  
geo_units_oc_dd.shp.xml  
geo_units_oc_dd.shx
```

## Date

Displays the local date and time

```
geo-shell> date
```

No parameters

```
geo-shell> date
```

Saturday, October 2, 2021 5:31:27 PM UTC

## Script

Parses the specified resource file and executes its commands

```
geo-shell> script src/test/resources/layer_count.txt
```

Name	Description	Mandatory	Specified Default	Unspecified Default
	The file to locate and execute	true		
lineNumbers	Display line numbers when executing the script	false	true	false

```
workspace open --name naturalearth --params src/test/resources/naturalearth.gpkg  
layer open --workspace naturalearth --layer countries --name countries  
layer count --name countries  
workspace close --name naturalearth
```

```
geo-shell> script src/test/resources/layer_count.txt
```

Workspace naturalearth opened!

Opened Workspace naturalearth Layer countries as countries

## System Properties

Shows the shell's properties

geo-shell> **system properties**

No parameters

geo-shell> **system properties**

```
awt.toolkit = sun.awt.X11.XToolkit
basedir = /home/runner/work/geo-shell/geo-shell
file.encoding = UTF-8
file.encoding.pkg = sun.io
file.separator = /
```

## Version

Displays shell version

No parameters

geo-shell> **version**

0.10-SNAPSHOT

## Download

Download a URL to a file.

geo-shell> **download --url https://astropedia.astrogeology.usgs.gov/download/Mars/Geology/Mars15MGeologicGISRenovation.zip --file mars.zip --overwrite false**

Name	Description	Mandatory	Specified Default	Unspecified Default
url	The url	true		
file	The file	true		
overwrite	Whether to overwrite the file or not	false	true	true

geo-shell> **download --url https://astropedia.astrogeology.usgs.gov/download/Mars/Geology/Mars15MGeologicGISRenovation.zip --file mars.zip --overwrite false**  
 Downloading <https://astropedia.astrogeology.usgs.gov/download/Mars/Geology/Mars15MGeologicGISRenovation.zip>

[Mars15MGeologicGISRenovation.zip](#) to /Users/jericks/Projects/geo-shell/mars.zip...

geo-shell> **unzip** --file mars.zip --directory mars

Unzipping /Users/jericks/Projects/geo-shell/mars.zip to /Users/jericks/Projects/geo-shell/mars

geo-shell> **style vector uniquevaluesfromtext** --field UnitSymbol --geometryType Polygon  
--styleFile mars/units.sld --textFile

mars/I1802ABC\_Mars\_global\_geology/I1802ABC\_geo\_units\_RGBlut.txt

Create a unique values style from /Users/jericks/Projects/geo-shell/mars/I1802ABC\_Mars\_global\_geology/I1802ABC\_geo\_units\_RGBlut.txt for UnitSymbol and Polygon to /Users/jericks/Projects/geo-shell/mars/units.sld

geo-shell> **workspace open** --name mars --params

mars/I1802ABC\_Mars\_global\_geology/Shapefiles/I1802ABC\_Mars2000\_Sphere/geo\_units\_oc\_dd.shp

Workspace mars opened!

geo-shell> **layer open** --workspace mars --layer geo\_units\_oc\_dd

Opened Workspace mars Layer geo\_units\_oc\_dd as mars:geo\_units\_oc\_dd

geo-shell> **layer style set** --name mars:geo\_units\_oc\_dd --style mars/units.sld

Style /Users/jericks/Projects/geo-shell/mars/units.sld set on mars:geo\_units\_oc\_dd

geo-shell> **map open** --name mars

Map mars opened!

geo-shell> **map add layer** --name mars --layer mars:geo\_units\_oc\_dd

Added mars:geo\_units\_oc\_dd layer to map mars

geo-shell> **map draw** --name mars

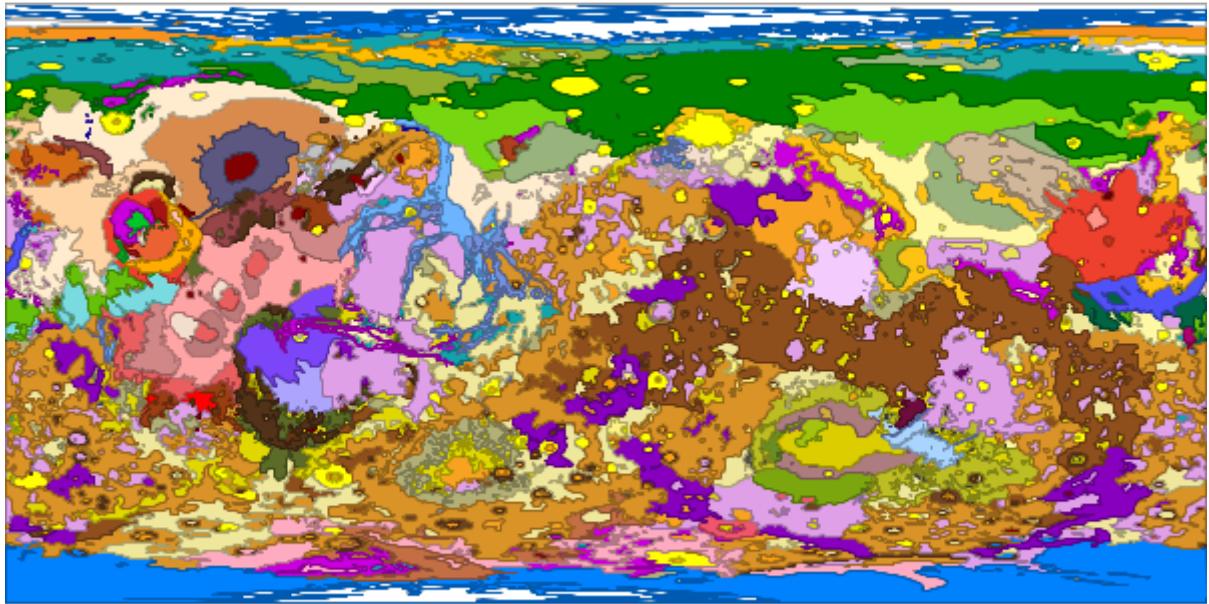

Done drawing /Users/jericks/Projects/geo-shell/image.png!

geo-shell> **map close** --name mars

Map mars closed!

geo-shell> **open** --file image.png

Opening /Users/jericks/Projects/geo-shell/image.png...

## Unzip

Unzip a file

```
geo-shell> unzip --file mars.zip --directory mars
```

Name	Description	Mandatory	Specified Default	Unspecified Default
file	The zip file	true		
directory	The directory	true		

```
geo-shell> unzip --file mars.zip --directory mars
```

```
Unzipping /Users/jericks/Projects/geo-shell/mars.zip to /Users/jericks/Projects/geo-shell/mars
```

## Open

Open a File.

```
geo-shell> open --file image.png
```

Name	Description	Mandatory	Specified Default	Unspecified Default
file	The File	true		

```
geo-shell> open --file image.png
```

```
Opening /Users/jericks/Projects/geo-shell/image.png...
```
